Report on Internal Control Over Financial Reporting

The Bank's principal executives and principal financial officers, or persons performing similar functions, are responsible for establishing and maintaining adequate internal control over financial reporting for the Bank's Financial Statements. For purposes of this report, "internal control over financial reporting" is defined as a process designed by, or under the supervision of the Bank's principal executives and principal financial officers, or persons performing similar functions, and effected by its Board of Directors, management and other personnel. This process provides reasonable assurance regarding the reliability of financial reporting information and the preparation of the Financial Statements for external purposes in accordance with accounting principles generally accepted in the United States of America.

Internal control over financial reporting includes those policies and procedures that: (1) pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of the assets of the Bank, (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial information in accordance with accounting principles generally accepted in the United States of America, and that receipts and expenditures are being made only in accordance with authorizations of management and directors of the Bank, and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the Bank's assets that could have a material effect on its Financial Statements.

The Bank's management has completed an assessment of the effectiveness of internal control over financial reporting as of June 30, 2010. In making the assessment, management used the framework in *Internal Control — Integrated Framework*, promulgated by the Committee of Sponsoring Organizations of the Treadway Commission, commonly referred to as the "COSO" criteria.

Based on the assessment performed, the Bank concluded that as of June 30, 2010, the internal control over financial reporting was effective based upon the COSO criteria. Additionally, based on this assessment, the Bank determined that there were no material weaknesses in the internal control over financial reporting as of June 30, 2010.

Management's Discussion and Analysis of Financial Condition and Results of Operations

The following discussion reviews the financial condition and results of operations of AgFirst Farm Credit Bank (AgFirst or Bank) as of and for the three and six month periods ended June 30, 2010. These comments should be read in conjunction with the accompanying financial statements, the Notes to the Financial Statements and the 2009 Annual Report of AgFirst Farm Credit Bank. AgFirst and its related associations (Associations or District Associations) are collectively referred to as the District. The accompanying financial statements were prepared under the oversight of the Audit Committee of the AgFirst Board of Directors.

Key ratios and data reported below, and in the accompanying financial statements, address the financial performance of AgFirst. However, neither the three months nor the six months results of operations may be indicative of an entire year due to the seasonal nature of a portion of AgFirst's business.

FINANCIAL CONDITION

Loan Portfolio

AgFirst's loan portfolio consists primarily of direct loans to District Associations (Direct Notes), loan participations/syndications purchased, Correspondent Lending loans (primarily first lien residential mortgages), and loans to Other Financing Institutions (OFIs) as shown below:

AgFirst Loan Portfolio <i>(dollars in thousands)</i>	June 30, 2010		December 31, 2009		June 30, 2009	
Direct Notes	\$14,555,600	70.23%	\$14,890,793	69.82%	\$14,962,803	70.18%
Participations/Syndications purchased, net	4,349,675	20.98	4,758,466	22.31	4,822,629	22.62
Correspondent Lending	1,805,367	8.71	1,671,060	7.84	1,518,452	7.12
Loans to OFIs	16,000	0.08	7,000	0.03	16,250	0.08
Total	\$20,726,642	100.00%	\$21,327,319	100.00%	\$21,320,134	100.00%

Total loans outstanding were \$20.727 billion at June 30, 2010, a decrease of \$600.7 million, or 2.82 percent, compared to total loans outstanding at December 31, 2009. The decline in loan volume, a trend that has continued since late 2008, largely reflects the persistent downturn in the general economy.

The weakened economy has affected the Bank's and District Associations' current and prospective customers in a number of ways, including lower demand and price for certain agricultural products and lower value for real estate and other investment holdings of some borrowers. These conditions have been detrimental to the general sentiment and financial capacity of many of the District's customers. As a result, customers have reduced production, delayed expansion plans, and generally taken actions to preserve their investment and working capital. Each of these factors has contributed to the lower loan demand throughout the District. Future loan demand is very difficult to predict. However, it is expected to remain weak for the remainder of 2010.

Credit Quality

Credit quality has also been adversely affected by the weak economy. Although credit quality has stabilized during 2010, problem asset levels remained elevated as can be seen in the following table:

AgFirst Total Loan Portfolio Credit Quality as of:			
Classification	June 30, 2010	December 31, 2009	June 30, 2009
Acceptable	87.34%	86.60%	92.95%
OAEM *	9.40%	9.48%	5.60%
Substandard	3.26%	3.92%	1.45%
Doubtful	0.00%	0.00%	0.00%

* Other Assets Especially Mentioned

Certain commodity groups have been adversely affected in the current economic cycle. Housing-related industries such as timber, sawmills, nurseries, and sod operations remain stressed. Also, many customers in the District rely on off-farm income. Improvement in these segments is dependent on general economic conditions such as employment levels and housing market activity.

Loan portfolio credit quality was adversely affected by lower real estate values in certain geographic areas within the Bank's chartered territory, particularly in Florida. Beginning in 2008, real estate values declined, population growth slowed, and housing foreclosures increased in Florida. Other areas of the District experienced a less severe reduction in real estate values. However, real estate sales remain depressed throughout.

In 2009, over-supply in the pork and dairy industries affected pricing for these commodities and resulted in lower revenue for many producers. Higher input prices, such as corn and other feedstuff, were also prevalent during certain periods of 2009, which further reduced profit margins for these producers and those in other segments that use these inputs. Supplies of pork and dairy products appear to be easing, which will result in improved pricing. Also, the costs of grain, oil, and certain other inputs have moderated, which should prove beneficial to livestock producers. The ethanol sector continues to be challenged as profit margins remain low, making the industry vulnerable to fluctuations in corn prices, excess capacity, and blended gasoline demand.

The credit conditions discussed above affect the credit quality of the Bank's participation/syndication loan portfolio directly. They also affect the credit quality of loan portfolios and earnings performance of the individual District Associations, which in turn is reflected in the quality of the Bank's Direct Notes. Continued weakness in the general economy and certain agricultural sectors will have an impact on credit quality for some time. Although credit quality is stabilizing, some problem assets will take an extended period of time to fully resolve due to their dependency on general economic conditions, including employment, the housing market, and real estate values.

Management reviews the Bank's risk tolerance at the individual loan and portfolio levels and makes adjustments to credit policy and underwriting standards when appropriate as a part of the ongoing risk management process.

Direct Notes

AgFirst's primary line of business is to provide funding to District Associations. Each Association is a federally chartered instrumentality of the United States and, like the Bank, is regulated by the Farm Credit Administration (FCA). AgFirst has a revolving line of credit, referred to as a Direct Note, in place with each of the Associations. Each of the Associations funds its lending and general corporate activities primarily by borrowing under its Direct Note. All assets of the Associations secure the Direct Notes. Lending terms are specified in a separate General Financing Agreement (GFA) between AgFirst and each Association, including the subsidiaries of the Associations. Each GFA contains minimum borrowing base margins, capital, and earnings requirements that must be maintained by the Association.

At June 30, 2010, total Direct Note volume outstanding was \$14.556 billion, a decrease of \$335.2 million, or 2.25 percent, compared to December 31, 2009. Weak loan demand, as discussed above, and a generally more conservative credit approach were the primary reasons for the decline in growth. Also, in some cases, business development resources have been redirected to problem asset management.

Credit quality statistics for the Direct Note portfolio are shown in the following chart:

Direct Note Credit Quality as of:			
Classification	June 30, 2010	December 31, 2009	June 30, 2009
Acceptable	87.05%	86.13%	94.40%
OAEM *	10.67%	11.26%	5.60%
Substandard	2.28%	2.61%	0.00%
Doubtful	0.00%	0.00%	0.00%

* Other Assets Especially Mentioned

As of June 30, 2010, fifteen of the twenty-two District Associations' Direct Notes, representing 87.05 percent of the Direct Note portfolio, were classified acceptable. Six of the remaining Direct Notes, representing 10.67 percent of the portfolio, were classified as Other Assets Especially Mentioned (OAEM), and one of the Direct Notes, representing 2.28 percent of the portfolio, was classified as substandard (adverse). As of December 31, 2009, and June 30, 2010, six Associations were in violation of earnings and/or borrowing base margin covenants under the GFA. One Association violated the capital covenant at December 31, 2009; however, this was corrected at the end of the first quarter of 2010. The Bank approved temporary waivers of the defaults and allowed these Associations to operate under special credit arrangements pursuant to their respective GFA. Two of these six Associations violated the June 30, 2010 earnings covenant and one of the two also violated the June 30, 2010 borrowing base margin covenant of their respective special credit arrangements. Additional temporary waivers of these defaults were granted and extensions of the special credit arrangements were approved to allow for development of plans to address these defaults. All of the assets of the various Associations secure the respective Direct Notes. The risk funds of an Association, including both capital and the allowance for loan losses, protect the interest of the Bank should a Direct Note default. None of the Direct Notes are considered impaired.

Participations/Syndications

AgFirst maintains a participations/syndications portfolio, which consists primarily of commercial agricultural and agribusiness loans. As of June 30, 2010, the participations/syndications portfolio totaled \$4.350 billion. The size of this portfolio decreased \$408.8 million, or 8.59 percent, from December 31, 2009 to June 30, 2010. As with the Direct Notes, borrower demand in this portfolio is anticipated to remain weak through 2010.

AgFirst employs a number of risk management techniques to limit credit risk, including underwriting standards and limits on the amounts of loans purchased from a single originator. Although the participations/syndications portfolio is comprised of a small number of relatively large loans, it is diversified both geographically and on a commodity basis. Concentration risk throughout the portfolio is mitigated through established maximum hold positions to a single borrower and to a single commodity.

Credit quality statistics for the participations/syndications portfolio declined during the past twelve months as shown in the following chart:

Participations/Syndications Credit Quality as of:			
Classification	June 30, 2010	December 31, 2009	June 30, 2009
Acceptable	83.21%	83.44%	86.39%
OAEM *	9.03%	7.18%	7.22%
Substandard	7.76%	9.38%	6.39%
Doubtful	0.00%	0.00%	0.00%

* Other Assets Especially Mentioned

Correspondent Lending

AgFirst also maintains a correspondent lending portfolio, which consists primarily of first lien residential mortgages. As of June 30, 2010, the correspondent lending portfolio totaled \$1.805 billion. From December 31, 2009 to June 30, 2010, this portfolio increased \$134.3 million, or 8.04 percent. The increase in volume of this portfolio continued to be influenced by refinancing activity generated by the lower interest rate environment and government incentives, which recently expired.

Substantially all loans in the correspondent lending portfolio are guaranteed by the Federal National Mortgage Association (Fannie Mae) and/or the Federal Agricultural Mortgage Corporation (Farmer Mac), thereby limiting credit risk to AgFirst. The guarantees are in the form of Long-Term Standby Commitments to Purchase, which give AgFirst the right to deliver delinquent loans to the guarantor at par. At June 30, 2010, 99.76 percent of the correspondent lending portfolio was classified as Acceptable and 0.24 percent was classified as Substandard.

Nonaccrual Loans, Other Property Owned, and Allowance for Loan Losses

Nonaccrual loans represent all loans for which there is a reasonable doubt as to the collection of principal and/or interest under the contractual terms of the loan. Nonaccrual loans for the Bank at June 30, 2010, were \$194.8 million compared to \$217.3 million at December 31, 2009. Nonaccrual loans decreased \$22.5 million during the six months ended June 30, 2010 primarily due to charge-offs of uncollectible balances of \$23.0 million (composed primarily of charge-offs on two borrower relationships totaling \$19.9 million). Other decreases to nonaccrual loans consisted of transfers to other property owned of \$5.9 million, transfers back to accrual status of \$15.2 million, and repayments of \$14.9 million. Offsetting these decreases were \$36.7 million of loan balances transferred to nonaccrual status during the six months ended June 30, 2010. The six largest nonaccrual borrower relationships accounted for 65.63 percent of the total. At June 30, 2010, total nonaccrual loans were primarily classified in the forestry (28.72 percent of the total), swine (18.97 percent), other real estate (17.76 percent), and cattle (13.27 percent) segments. Some of these nonaccrual loans are secured by real estate, which has been negatively impacted by the current economic environment as discussed previously. Nonaccrual loans were 0.94 percent of total loans outstanding at June 30, 2010.

Other property owned (OPO) consists of assets once held as loan collateral that were acquired through foreclosure or deeded to the Bank (or a lender group) in satisfaction of secured loans. OPO may be comprised of real estate, equipment, and equity interests in companies or partnerships. OPO decreased \$859 thousand during the first six months of 2010 and totaled \$25.1 million at June 30, 2010. For the six months ended June 30, 2010, transfers to OPO were \$5.9 million, which is composed primarily of one cattle and groves land holding of \$4.6 million. Disposals of OPO of \$6.8 million were primarily from the disposition of the Bank's interest in an ethanol production facility through a \$5.8 million sale. Total gains of \$1.6 million from this sale were deferred and will be recognized in future periods in accordance with accounting guidance. The largest OPO holding at June 30, 2010, which consisted of several parcels of land, was \$13.7 million (54.74 percent of the total).

The Bank maintains an allowance for loan losses at a level management considers adequate to provide for probable and estimable credit losses within the loan portfolio as of each reported balance sheet date. The allowance for loan losses was \$31.9 million at June 30, 2010, as compared with \$32.3 million at December 31, 2009. The decrease during the six months ended June 30, 2010 of \$395 thousand was primarily due to charge-offs of \$23.0 million for loan amounts determined to be uncollectible, offset by provision expense increases of \$22.5 million. Charge-offs were related primarily to the forestry (73.59 percent of the total) and other real estate (22.16 percent of the total) segments. The allowance at June 30, 2010 included specific reserves of \$19.6 million (66.74 percent of the total) primarily related to credits for participation borrower relationships within the swine, forestry, and ethanol industries and \$12.3 million of general reserves attributed to participation loans. The total allowance at June 30, 2010 was comprised primarily of reserves for the forestry (20.42 percent), swine (19.36 percent), ethanol (7.65 percent), processing (6.73 percent), nonfarm income (6.63 percent), and nursery/greenhouses (6.59 percent) segments. Declining real estate values impacted charge-offs and reserves in several of these loan segments. See Note 3, *Allowance for Loan Losses and Impaired Loans*, in the Notes to the Financial Statements for further information. See *Provision for Loan Losses* section below for details regarding increases to the allowance from provision expense.

Liquidity and Funding Sources

One of AgFirst's primary responsibilities is to maintain sufficient liquidity to fund the lending operations of the District Associations, in addition to its own needs. The primary source of funds for AgFirst is the issuance of Systemwide Debt Securities through the Federal Farm Credit Banks Funding Corporation. At June 30, 2010, AgFirst had \$28.496 billion in total debt outstanding compared to \$28.694 billion at December 31, 2009. In addition, other interest-bearing liabilities for AgFirst included \$225.0 million in Mandatorily Redeemable Preferred Stock in both periods. Total interest-bearing liabilities decreased primarily due to the decrease in loan volume as discussed in this report. The Bank anticipates continued access to funding through the issuance of Farm Credit System debt.

AgFirst maintains a \$150.0 million unsecured committed line of credit facility from its primary commercial depository bank. The line of credit is tied to AgFirst's master cash management clearing account.

Cash and cash equivalents, which increased \$500.6 million from December 31, 2009 to a total of \$1.440 billion at June 30, 2010, consist primarily of cash on deposit and money market securities that are short term in nature (from overnight maturities to maturities that range up to 90 days). Money market securities must carry one of the two highest short-term ratings from a rating agency. The increase in cash and cash equivalents was a result of efforts to strengthen the Bank's liquidity position.

Investment securities totaled \$8.213 billion, or 26.75 percent of total assets at June 30, 2010, compared to \$8.226 billion, or 26.65 percent, as of December 31, 2009. Investment securities decreased \$12.9 million, 0.16 percent, compared to December 31, 2009, as management maintained the investment securities portfolio size generally proportionate with that of the loan portfolio and within regulatory and policy guidelines.

Investment securities classified as being available-for-sale totaled \$6.976 billion at June 30, 2010. Available-for-sale investments at June 30, 2010 included \$4.568 billion in Agency Collateralized Mortgage Obligations (CMOs), \$2.049 billion in Agency Adjustable Rate Mortgages, \$323.8 million in non-agency CMOs, and \$35.6 million in asset-backed securities. Since the majority of the portfolio is invested in agency securities, the portfolio is highly liquid and potential credit loss exposure is limited.

As of June 30, 2010, AgFirst exceeded all applicable regulatory liquidity requirements. FCA regulations require a liquidity policy that establishes a minimum "coverage" level of 90 days. "Coverage" is defined as the number of days that maturing debt could be funded through the sale of eligible available-for-sale investments and cash and cash equivalents maintained by the Bank. At June 30, 2010, AgFirst's coverage was 195 days. The Bank's cash and cash equivalents position provided 19 days of the total 195 days of liquidity coverage. Investment securities fully backed by the U.S. government provided an additional 94 days of liquidity. Cash provided by the Bank's operating activities, primarily generated from net interest income in excess of operating expenses and maturities in the loan portfolio, is an additional source of liquidity for the Bank that is not reflected in the coverage calculation of 195 days.

Investment securities classified as being held-to-maturity totaled \$1.238 billion at June 30, 2010. These held-to-maturity investments were primarily Rural Housing Mortgage-Backed Securities purchased under a Mission Related Investment pilot program approved by the FCA in 2005.

The FCA considers asset-backed and mortgage-backed investment securities rated below AAA/Aaa by the NRSROs to be ineligible and requires System institutions to divest their portfolios of such investments. However, System institutions may seek approval to continue to hold these investments. For each of the investment securities in the Bank's portfolio at June 30, 2010 rated below AAA/Aaa (total fair value of \$212.9 million and amortized cost of \$285.5 million), the Bank has developed and submitted plans which were approved by the FCA that provide that these securities may continue to be held. A plan to hold one recently ineligible security is currently in the process of being submitted to the FCA for approval. Management is of the opinion that holding these securities will result in a higher return for the Bank than selling them in the current illiquid market.

For purposes of calculating the risk adjusted assets amount used in the permanent capital, total surplus, and core surplus regulatory ratios, certain Bank ineligible securities are risk weighted between 200 percent and 50 percent instead of the standard 20 percent. These ineligible securities had a fair value of \$157.6 million and amortized cost of \$192.6 million. Other ineligible securities must be deducted completely from both capital and risk adjusted assets, based on the extent of their below investment grade rating from NRSROs. These securities had a fair value of \$57.8 million and amortized cost of \$77.3 million at June 30, 2010. See the *Capital Resources* section below for further discussion of the regulatory ratios. In addition, all ineligible investments, except non-agency reperformer CMOs which meet certain conditions, are excluded from liquidity coverage as defined above.

Total net unrealized losses related to the available-for-sale securities decreased \$99.3 million during the six months ended June 30, 2010 to a total of \$21.8 million at June 30, 2010. These net unrealized losses are reflected in Accumulated Other Comprehensive Income (AOCI) in the Financial Statements. The net unrealized losses stem from both normal market factors such as the current interest rate environment and some continued illiquidity in certain mortgage debt security markets.

The Bank performs periodic credit reviews, including other-than-temporary impairment analysis, on its entire investment securities portfolio. Additional analysis for each security not rated in the top category by the NRSROs is performed using a cash flow model with key assumptions and performance factors which may include credit default rate, prepayment rate, and loss severity. The objective is to quantify future possible loss of principal or interest due on each identified security. The credit enhancements specific to the individual security are considered as appropriate, and may include monoline credit insurance, subordination, over-collateralization, and excess interest spread. Asset-backed securities covered by insurers are analyzed with insurance and without, to quantify the extent of reliance on their guarantee. Based on the results of all analyses, the Bank recognized other-than-temporary credit related impairment of \$10.0 million on asset-backed securities and non-agency CMOs in its portfolio during the six months ended June 30, 2010, which was included in Net Impairment Losses on Investments in the Statements of Income. Credit loss is defined as the shortfall of the present value of the cash flows expected to be collected in relation to the amortized cost basis. Payment shortfalls on asset-backed securities have totaled only \$11.0 million life to date (\$5.3 million in 2010), compared to total other-than-temporary credit related impairment charges life to date of \$35.1 million (\$7.1 million in 2010). Total other-than-temporary credit related impairment charges on non-agency CMOs have totaled \$8.1 million life to date (\$2.9 million in 2010). There have been no payment shortfalls on non-agency CMOs. See Note 2, *Investment Securities*, in the Notes to the Financial Statements for further information.

For purposes of determining the fair values of the modeled securities and the resulting unrealized gain/loss impact through AOCI, the Bank considers both a price, or “mark,” provided by a third party pricing service and also a value determined using the results of a modeling process. The Bank reviews and periodically discusses with the third party pricing service and valuation experts the assumptions used in their pricing models for the asset-backed and non-agency CMO securities impacted by inactive trading or distressed sales. This process ensures that, when relevant observable inputs are not available, the fair value reported for each security reflects the price expected to be received in an orderly transaction that is not a forced liquidation or distressed sale at the measurement date. The modeling process was factored into the pricing for the asset-backed and non-agency CMO security portfolios.

Capital Resources

Total shareholders’ equity increased \$278.4 million from December 31, 2009 to June 30, 2010. This 17.62 percent net increase is primarily attributed to an increase in unallocated retained earnings from net income of \$206.7 million and a decrease of \$99.3 million in unrealized losses on investments available-for-sale, a component of AOCI. Offsetting these increases was preferred stock dividends paid of \$13.7 million. The Bank also declared and distributed \$10.0 million of cash patronage in June 2010 to District Associations.

As of June 30, 2010, AgFirst exceeded the minimum permanent capital, core surplus, total surplus, and net collateral ratio requirements established by FCA Regulations. In conjunction with the issuance of the Mandatorily Redeemable Preferred Stock, FCA requires AgFirst to maintain a minimum net collateral ratio of 104.00 percent compared to the System regulatory minimum of 103.00 percent. AgFirst reported the following regulatory ratios:

	Regulatory Minimum	6/30/10	12/31/09	6/30/09
Permanent Capital Ratio	7.00%	18.80%	16.86%	15.97%
Total Surplus Ratio	7.00%	18.76%	16.83%	15.92%
Core Surplus Ratio	3.50%	11.60%	9.85%	9.03%
Net Collateral Ratio	104.00%	106.55%	105.66%	105.94%

The Bank's permanent capital, total surplus, and core surplus ratios increased at June 30, 2010 as compared to December 31, 2009. These ratios are calculated using three month average daily balances for both capital and assets. The temporary impairment in AOCI, as discussed above, does not affect the reported capital ratios because the effect of AOCI is excluded entirely from the risk-based capital ratios. The increases in the permanent capital, total surplus, and core surplus ratios for June 30, 2010, are the result in part of FCA's approval of a change in capital treatment of certain ineligible securities. Beginning in the second quarter of 2010, more favorable capital treatment was permitted for the risk weighting of the senior-most positions of asset-backed securities and non-agency CMOs, as well as, guaranteed amounts of non-agency reperformer CMOs. For purposes of the net collateral ratio, all ineligible investments are stated at lower of cost or market, except that guaranteed amounts of non-agency reperformer CMOs are used if higher than the lower of cost or market. This change improved the permanent capital and total surplus ratios by 82 basis points and the core surplus ratio by 88 basis points at June 30, 2010. The change had minimal impact on the net collateral ratio.

RESULTS OF OPERATIONS

Net income for the three months ended June 30, 2010 was \$90.1 million, compared to \$63.9 million at June 30, 2009, an increase of \$26.2 million, or 40.89 percent. For the six months ended June 30, 2010, net income was \$206.7 million, compared to \$116.4 million at June 30, 2009, an increase of \$90.3 million, or 77.48 percent. The overall increases for the three and six month periods are discussed below.

Net Interest Income

Net interest income for the three months ended June 30, 2010 was \$140.3 million compared to \$117.7 million for the same period of 2009, an increase of \$22.6 million or 19.24 percent. For the six months ended June 30, 2010, net interest income was \$280.6 million, compared to \$225.2 million, at June 30, 2009, an increase of \$55.4 million, or 24.62 percent. The net interest margin was 1.93 percent and 1.94 percent in the current year three and six month periods respectively, an improvement of 34 basis points and 39 basis points over the same periods of 2009. Spreads improved for several reasons, but primarily resulted from called debt being replaced by new debt issued at a lower rate of interest, decreasing funding costs. Loan pricing compared to the underlying cost of funds also improved, reflecting increased liquidity and credit risk premiums in the lending markets. Change in net interest income due to the change in balance sheet volume was very minimal as a result of decreased loan demand previously discussed. Prospectively, as assets reprice in the lower interest rate environment, spreads and margins will narrow which can negatively affect net interest income.

The following table illustrates the changes in net interest income:

(dollars in thousands)	For the three months ended June 30, 2010 vs. June 30, 2009			For the six months ended June 30, 2010 vs. June 30, 2009		
	Increase (decrease) due to changes in:			Increase (decrease) due to changes in:		
	Volume	Rate	Total	Volume	Rate	Total
Interest Income:						
Loans	\$ (3,627)	\$ (10,503)	\$ (14,130)	\$ (4,849)	\$ (30,550)	\$ (35,399)
Investments & Cash Equivalents	(436)	(2,729)	(3,165)	922	(6,916)	(5,994)
Total Interest Income	\$ (4,063)	\$ (13,232)	\$ (17,295)	\$ (3,927)	\$ (37,466)	\$ (41,393)
Interest Expense:						
Interest-Bearing Liabilities	\$ 645	\$ (40,578)	\$ (39,933)	\$ 4,307	\$ (101,145)	\$ (96,838)
Changes in Net Interest Income	\$ (4,708)	\$ 27,346	\$ 22,638	\$ (8,234)	\$ 63,679	\$ 55,445

Provision for Loan Losses

The provision for loan losses was \$18.1 million and \$22.5 million for the three and six month periods ended June 30, 2010, compared to \$18.2 million and \$34.9 million for the same periods in 2009. Provision expense for the three month period ended June 30, 2010 included specific reserve increases for four participation borrower relationships totaling \$15.3 million. Provision expense for the three month period primarily consisted of borrowers in the forestry (70.47 percent of the total), other real estate (13.52 percent) and ethanol (11.06 percent) segments. Provision expense for the six month period ended June 30, 2010 included specific reserve increases for three participation borrower relationships totaling \$18.9 million. Provision expense for the six month period primarily related to borrowers in the forestry (69.18 percent of the total) and other real estate (25.30 percent) segments, offset in part by a net provision reversal of \$1.7 million related to the ethanol segment.

As mentioned previously, declining real estate values were, in part, the reason for some of the provision expense recognized by the Bank. See Note 3, *Allowance for Loan Losses and Impaired Loans*, in the Notes to the Financial Statements for further information.

Noninterest Income

The following table illustrates the changes in noninterest income:

Change in Noninterest Income	For the three months ended June 30,			For the six months ended June 30,		
	Increase/ (Decrease)			Increase/ (Decrease)		
	2010	2009	(Decrease)	2010	2009	(Decrease)
(dollars in thousands)						
Loan fees	\$ 3,320	\$ 3,095	\$ 225	\$ 6,382	\$ 5,345	\$ 1,037
Gains (losses) from other property owned, net	183	(2,286)	2,469	652	(2,286)	2,938
Gains (losses) on investments, net	—	—	—	1,568	—	1,568
Net impairment losses on investments	(3,227)	(3,378)	151	(9,985)	(8,831)	(1,154)
Gains (losses) on derivatives, net	—	(266)	266	—	305	(305)
Gains (losses) on sale of rural home loans, net	—	—	—	(112)	—	(112)
Patronage refunds from other Farm Credit Institutions	(43)	375	(418)	265	1,133	(868)
Insurance premium refund	—	—	—	10,440	—	10,440
Other noninterest income	888	1,607	(719)	1,597	3,174	(1,577)
Total noninterest income	\$ 1,121	\$ (853)	\$ 1,974	\$ 10,807	\$ (1,160)	\$ 11,967

Noninterest income, net of certain gains and losses as detailed in the table above for the three and six months ended June 30, 2010, was \$1.1 million and \$10.8 million, respectively, which reflected an increase of \$2.0 million and \$12.0 million compared to the same periods in 2009.

The increase of total noninterest income of \$2.0 million for the three months ended June 30, 2010 was due primarily to costs, including legal and appraisal fees, associated with OPO acquired during the second quarter of 2009.

The increase of total noninterest income of \$12.0 million for the six months ended June 30, 2010 was due primarily to the Bank's recording \$10.4 million of insurance premium refunds during the first quarter of 2010 from the Farm Credit System Insurance Corporation (FCSIC), which insures the System's debt obligations. These payments are nonrecurring and resulted from the assets of the Farm Credit Insurance Fund exceeding the secure base amount as defined by the Farm Credit Act. Also contributing to the increase in noninterest income was \$652 thousand in gains from other property owned in the first half of 2010 compared to \$2.3 million in costs (including legal and appraisal fees) in the first half of 2009. Gains of \$1.6 million on the sales of investment securities were recorded during the first quarter of 2010. These sales were the result of normal investment activities related to managing the composition and overall size of the Bank's portfolio. Offsetting the increases to noninterest income was an increase of \$1.2 million in the recognition of credit related other-than-temporary impairment on several of the Bank's investment securities during the first half of 2010 as compared to the first half of 2009. See discussion of 2010 credit related other-than-temporary impairment above. Also, other noninterest income decreased \$1.6 million for the six months ended June 30, 2010 primarily due to a captive insurance allocated loss based on claims experience recorded in 2010.

Noninterest Expense

The following table illustrates the changes in noninterest expense:

Change in Noninterest Expense	For the three months ended June 30,			For the six months ended June 30,		
	2010	2009	Increase/ (Decrease)	2010	2009	Increase/ (Decrease)
<i>(dollars in thousands)</i>						
Salaries and employee benefits	\$ 10,063	\$ 9,496	\$ 567	\$ 19,908	\$ 18,611	\$ 1,297
Occupancy and equipment	3,758	3,457	301	7,298	6,669	629
Insurance Fund premiums	21	5,337	(5,316)	2,727	10,329	(7,602)
Other operating expenses	4,950	4,946	4	10,069	10,163	(94)
Called debt expense	12,321	9,495	2,826	18,106	23,296	(5,190)
Correspondent lending servicing expense	2,112	1,878	234	4,057	3,496	561
Other noninterest expense	69	69	—	139	139	—
Total noninterest expense	\$ 33,294	\$ 34,678	\$ (1,384)	\$ 62,304	\$ 72,703	\$ (10,399)

Noninterest expense for the three months ended June 30, 2010 was \$33.3 million, which reflected a decrease of \$1.4 million compared to the corresponding period in 2009. For the six months ended June 30, 2010, noninterest expense was \$62.3 million, which reflected a decrease of \$10.4 million compared to the corresponding period in 2009. This decrease of \$10.4 million was primarily due to decreases in insurance fund premiums and called debt expense offset by an increase in salaries and employee benefits.

Insurance Fund premiums decreased \$5.3 million (99.61 percent) and \$7.6 million (73.60 percent) for the three and six month periods due primarily to a change in the premium rate charged. In June 2010, the base annual premium rate was reduced from 10 to 5 basis points retroactive to January 1, 2010 compared to the 20 basis points charged in 2009.

Concession or debt issuance expense is amortized over the life of the underlying debt security. When debt securities are called prior to maturity, any unamortized concession is expensed. Called debt expense increased \$2.8 million (29.76 percent) for the three month period and decreased \$5.2 million (22.28 percent) for the six month period. Call

options were exercised on bonds totaling \$12.779 billion during the first half of 2010 compared to \$14.675 billion during the first half of 2009. The called debt expense is more than offset by interest expense savings realized as called debt is replaced by new debt issued at a lower rate of interest. Over time, the favorable effect on net interest income is diminished as earning assets reprice downward.

Salaries and employee benefits increased \$567 thousand (5.97 percent) and \$1.3 million (6.97 percent) for the three and six months ended June 30, 2010, due primarily to normal salary administration and increased employee benefit costs.

Other noninterest expense consists of amortization of mandatorily redeemable preferred stock issuance costs.

Key results of operations comparisons:

	Annualized for the six months ended June 30, 2010	For the year ended December 31, 2009	Annualized for the six months ended June 30, 2009
Return on average assets	1.37%	1.03%	0.79%
Return on average shareholders' equity	31.31%	20.90%	17.40%
Net interest income as a percentage of average earning assets	1.94%	1.66%	1.55%
Net (charge-offs) recoveries to average loans	(0.11)%	(0.28)%	(0.36)%

REGULATORY MATTERS

During 2010, the FCA has entered into written supervisory agreements with two District Associations whose combined assets totaled less than \$850.0 million at June 30, 2010. The written supervisory agreements require those District Associations to take corrective actions with respect to certain areas of their operations, including capital, portfolio management, and asset quality. These enforcement actions will not have a significant impact on the Bank's or District's financial condition or results of operations. While the FCA has taken no other enforcement actions against the Bank or other District Associations during 2010, five additional District Associations are currently subject to special supervision by the FCA, subjecting them to additional regulatory scrutiny.

On July 8, 2010, the Farm Credit Administration issued an advance notice of proposed rulemaking (ANPRM) to gather public comments on the promulgation of Tier 1 and Tier 2 capital standards for Farm Credit System institutions. The Tier 1/Tier 2 capital standards would be similar to the capital tiers delineated in the Basel Accord that other Federal financial regulatory agencies have adopted for the banking organizations they regulate. The Farm Credit Administration is seeking comments to facilitate the development of this regulatory capital framework, including new minimum risk-based and leverage ratio capital requirements that take into consideration both the System's cooperative structure of primarily wholesale banks owned by retail lender Associations that are, in turn, owned by their member borrowers, and the System's status as a Government-sponsored enterprise. The comment period for the ANPRM ends November 5, 2010.

Financial Regulatory Reform

The Dodd-Frank Wall Street Reform and Consumer Protection Act (the Dodd-Frank Act) was signed into law on July 21, 2010. While the Dodd-Frank Act represents a significant overhaul of many aspects of the regulation of the financial services industry, many of the rules and regulations are not applicable to the System. The Dodd-Frank Act requires various federal agencies to adopt a broad range of new implementing rules and regulations, and to prepare numerous studies and reports for Congress. The federal agencies are given significant discretion in drafting the implementing rules and regulations, and consequently, many of the details and much of the impact of the Dodd-Frank Act may not be known for many months or years.

The Dodd-Frank Act creates new regulators and expands the authority of the Federal Reserve Board over non-bank financial companies previously not subject to its or other bank regulators' direct jurisdiction, particularly those that are important to the U.S. financial system. Nevertheless, the Dodd-Frank Act largely preserves the authority of the

Farm Credit Administration as the System's independent federal regulator by excluding System institutions from being a non-bank financial company and providing other exemptions and exclusions from certain of the law's provisions. Also, the rules prohibiting banking entities from engaging in proprietary trading under the so-called Volcker Rule will not apply to the debt securities issued by the System.

The provisions of the Dodd-Frank Act pertaining to the regulation of over-the-counter derivatives will require more of these transactions to be cleared through a third-party central clearinghouse and traded on regulated exchanges. These requirements have the potential of making derivative transactions more costly and less attractive as risk management tools for System institutions. The Dodd-Frank Act requires the Commodities Futures Trading Commission to consider an end-user exemption from the mandatory clearing and trading requirements for derivative transactions entered into by certain System institutions.

Among the studies called for under the Act are two that will examine Fannie Mae, Freddie Mac, and federal home loan finance. One provision expressed Congress' sense of importance of GSE reform to residential mortgage credit. The other calls for the Treasury department to conduct a study on ending the conservatorship of Fannie Mae and Freddie Mac and reforming the federal housing finance system. A potential risk for the Farm Credit System is that the System is also a GSE and may directly or indirectly be impacted by the decisions made as Congress addresses Fannie Mae and Freddie Mac.

In light of the foregoing, it is difficult to predict at this time the extent to which the Dodd-Frank Act or the forthcoming implementing rules and regulations will have on the System. However, it is possible they could affect funding strategies and increase funding costs.

DISTRICT MERGER ACTIVITY

Please refer to Note 9, *District Merger Activity*, in the Notes to the Financial Statements for information regarding merger activity in the District.

RECENTLY ISSUED ACCOUNTING PRONOUNCEMENTS

Please refer to Note 1, *Organization, Significant Accounting Policies, and Recently Issued Accounting Pronouncements*, in the Notes to the Financial Statements, and the 2009 Annual Report of AgFirst Farm Credit Bank for recently issued accounting pronouncements.

NOTE: Shareholder investment in a District Association is materially affected by the financial condition and results of operations of AgFirst Farm Credit Bank. Copies of AgFirst's annual and quarterly reports are available upon request free of charge by calling 1-800-845-1745, ext. 2378, or writing Stephen Gilbert, Controller, AgFirst Farm Credit Bank, P.O. Box 1499, Columbia, SC 29202. Combined information concerning AgFirst Farm Credit Bank and District Associations can also be obtained at the Bank's website, www.agfirst.com. AgFirst prepares a quarterly report within 40 days after the end of each fiscal quarter, except that no quarterly report need be prepared for the fiscal quarter that coincides with the end of the fiscal year of the institution.

Notes to the Financial Statements

(dollars in thousands, except as noted)
(unaudited)

NOTE 1 — ORGANIZATION, SIGNIFICANT ACCOUNTING POLICIES, AND RECENTLY ISSUED ACCOUNTING PRONOUNCEMENTS

The accompanying financial statements include the accounts of AgFirst Farm Credit Bank (AgFirst or Bank). AgFirst and its related twenty-two associations (Associations or District Associations) are collectively referred to as the District. A description of the organization and operations, the significant accounting policies followed, and the financial condition and results of operations of the Bank as of and for the year ended December 31, 2009 are contained in the 2009 Annual Report to Shareholders. These unaudited second quarter 2010 financial statements should be read in conjunction with the 2009 Annual Report to Shareholders.

The accompanying financial statements contain all adjustments necessary for a fair presentation of the interim financial condition and results of operations and conform with generally accepted accounting principles (GAAP) and prevailing practices within the banking industry. The results for the six months ended June 30, 2010 are not necessarily indicative of the results to be expected for the year ending December 31, 2010.

There were no reclassifications of amounts in the prior period's financial statements to conform to the current period's financial statement presentation. During the second quarter of 2009, the Bank reclassified certain financial instruments which totaled \$91.4 million from investments to loans. These instruments were secondary market acquisitions of either private placement or senior secured notes transacted under the scope of the Bank's lending authority. The reclassification better reflects the nature of these notes and provides for consistent presentation across the Farm Credit System. This reclassification of \$91.4 million is reflected as a non-cash item in the Statements of Cash Flows and did not have a significant impact on the Financial Statements or the regulatory ratios.

The Bank maintains an allowance for loan losses at a level considered adequate by management to provide for probable and estimable losses inherent in the loan portfolio. The allowance for loan losses is increased through provisions for loan losses and loan recoveries and is decreased through allowance for loan losses reversals and loan charge-offs. A review of individual loans in each respective portfolio is performed periodically to determine the appropriateness of risk ratings and to assure loss exposure to the Bank has been identified. Certain loan pools acquired from several of the District Associations are analyzed in accordance with the selling Association's allowance methodologies for assigning general and specific allowances. The allowance for loan losses is a valuation account used to reasonably estimate loan losses as of the financial statement date. Determining the appropriate allowance for loan losses balance involves significant judgment about when a loss has been incurred and the amount of that loss. The Bank considers factors such as credit risk classifications, collateral values, risk concentrations, weather related conditions, current production and economic conditions, and prior loan loss experience, among others, when determining the allowance for loan losses.

A specific allowance may be established for impaired loans under Financial Accounting Standards Board (FASB) guidance on accounting by creditors for impairment of a loan. Impairment of these loans is measured based on the present value of expected future cash flows discounted at the loan's effective interest rate, or at the loan's observable market price, or fair value of the collateral if the loan is collateral dependent.

A general allowance may also be established under FASB guidance on accounting for contingencies, to reflect estimated probable credit losses incurred in the remainder of the loan portfolio at the financial statement date, which excludes loans included under the specific allowance discussed above. A general allowance can be evaluated on a pool basis for those loans with similar characteristics. The level of the general allowance may be based on management's best estimate of the likelihood of default adjusted for other relevant factors reflecting the current environment.

In addition to the recently issued accounting pronouncements discussed in the 2009 Annual Report to Shareholders, in June 2009, the FASB issued guidance “Accounting for Transfers of Financial Assets,” which amended previous guidance by improving the relevance, representational faithfulness, and comparability of the information that a reporting entity provides in its financial statements about a transfer of financial assets; the effects of a transfer on its financial position, financial performance, and cash flows; and a transferor’s continuing involvement, if any, in transferred financial assets.

This guidance was effective January 1, 2010. This guidance must be applied to transfers occurring on or after the effective date. Additionally, the concept of a qualifying special purpose entity is no longer relevant for accounting purposes. Therefore, formerly qualifying special-purpose entities (as defined under previous accounting guidance) should be evaluated for consolidation by reporting entities on and after the effective date in accordance with the applicable consolidation guidance. If the evaluation on the effective date results in consolidation, the reporting entity should apply the transition guidance that requires consolidation. The Bank evaluated the impact of adoption on its loan participation agreements to ensure that participations would meet the requirements for sales treatment. The impact of adoption on January 1, 2010 was immaterial to the Bank’s financial condition and results of operations.

In June 2009, the FASB also issued guidance to improve financial reporting for those enterprises involved with variable interest entities, which amends previous guidance by requiring an enterprise to perform an analysis to determine whether the enterprise’s variable interest or interests give it a controlling financial interest in a variable interest entity.

Additionally, an enterprise is required to assess whether it has an implicit financial responsibility to ensure that a variable interest entity operates as designed when determining whether it has the power to direct the activities of the variable interest entity that most significantly impact the entity’s economic performance.

This guidance was effective January 1, 2010. The Bank does not have any variable interest or controlling interest in a variable entity. Therefore, there was no impact of adoption of the guidance for the Bank.

Effective January 1, 2010, the Bank adopted FASB guidance “Fair Value Measurements and Disclosures,” which is intended to improve disclosures about fair value measurement by increasing transparency in financial reporting. The changes will provide a greater level of disaggregated information and more detail disclosures of valuation techniques and inputs to fair value measurement. The new disclosures and clarification of existing disclosures were effective for interim and annual reporting periods beginning after December 15, 2009, except for the disclosures about purchases, sales, issuances, and settlements in the rollforward of activity in Level 3 fair value measurements. Those disclosures are effective for fiscal years beginning after December 15, 2010, and for interim periods within those fiscal years. The adoption of this guidance had no impact on the Bank’s financial condition and results of operations but resulted in additional disclosures (see Note 4).

In July 2010, the FASB issued guidance on “Disclosures about the Credit Quality of Financing Receivables and the Allowance for Credit Losses.” This guidance is intended to provide additional information to assist financial statement users in assessing an entity’s credit risk exposures and evaluating the adequacy of its allowance for credit losses. Existing disclosures would be amended to include additional disclosures of financing receivables on both a portfolio segment and class of financing receivable basis. This would include a rollforward schedule of the allowance for credit losses from the beginning of the reporting period to the end of the period on a portfolio segment basis, with the ending balance further disclosed on the basis of the method of impairment (individually or collectively evaluated). The guidance also calls for new disclosures including but not limited to credit quality indicators at the end of the reporting period by class of financing receivables, the aging of past due financing receivables, nature and extent of financing receivables modified as troubled debt restructurings by class and the effect on the allowance for credit losses. For public entities, the disclosures as of the end of a reporting period are effective for interim and annual reporting periods ending on or after December 15, 2010. The disclosures about activity that occurs during a reporting period are effective for interim and annual reporting periods beginning on or after December 15, 2010. The adoption of this guidance should have no impact on the Bank’s financial condition or results of operations, but it will result in additional disclosures.

NOTE 2 — INVESTMENT SECURITIES

Available-for-sale

A summary of the amortized cost and fair value of debt securities held as available-for-sale investments as of June 30, 2010 and December 31, 2009 follows:

	June 30, 2010				
<i>(dollars in thousands)</i>	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value	Yield
U.S. Govt. GNMA					
MBS/CMOs	\$ 4,489,822	\$ 82,390	\$ (4,440)	\$ 4,567,772	2.09%
U.S. Govt. Agency MBS	2,044,340	31,121	(26,929)	2,048,532	1.58
Non-Agency CMOs	410,140	—	(86,355)	323,785	0.75
Asset-Backed Securities	53,194	—	(17,597)	35,597	1.66
Total	\$ 6,997,496	\$ 113,511	\$ (135,321)	\$ 6,975,686	1.86%

Included in the available-for-sale investments are collateralized mortgage obligations (CMOs). Substantially all CMO securities have contractual maturities in excess of ten years. However, expected maturities for CMO securities will differ from contractual maturities because borrowers may have the right to prepay obligations with or without prepayment penalties.

During the first half of 2010, proceeds from sales of investment securities were \$57.5 million and realized gains were \$1.6 million. There were no sales of investment securities during the first half of 2009.

AgFirst's investments include primarily mortgage-backed securities (MBSs) and asset backed securities (ABSs). These securities are held to maintain a liquidity reserve, manage short-term surplus funds, and manage interest rate risk. These securities must meet the applicable Farm Credit Administration (FCA) regulatory guidelines, which require these securities to be high quality, senior class, and rated in the top category (AAA/Aaa) by Nationally Recognized Statistical Rating Organizations (NRSROs) at the time of purchase. To achieve the ratings, these securities have a guarantee of timely payment of principal and interest, credit enhancements achieved through over collateralization or other means, and the priority of payments of senior classes over junior classes. All ABSs have credit enhancement features including senior/subordinate structure and/or are backed by a bond insurer.

The FCA considers a MBS or ABS ineligible if it falls below the AAA/Aaa credit rating criteria and requires System institutions to divest of such an investment unless the FCA grants specific approval to continue to hold an ineligible security.

The Bank's MBSs are collateralized by U.S. government or U.S. agency guaranteed residential mortgages and all were rated AAA/Aaa at June 30, 2010. Non-agency CMO securities not rated in the top category by at least one of the NRSROs at June 30, 2010 had a fair value of \$188.3 million. ABSs not rated in the top category by at least one of the NRSROs at June 30, 2010 had a fair value of \$24.6 million. For each of these investment securities in the Bank's portfolio rated below AAA/Aaa, the Bank has developed and submitted plans for approval by the FCA that provide that the securities may be held to maturity. The FCA has approved, with conditions, the Bank's plans for all but one investment that has recently become ineligible. The Bank is in the process of submitting a plan to hold this investment to the FCA for approval.

The fair value of all investments at June 30, 2010 split rated AAA/Aaa or lower by the NRSROs totaled \$345.0 million (amortized cost of \$447.5 million). This represents approximately 4.17 percent (and 5.43 percent) of total fair value (and amortized cost) of the Bank's total investment portfolio at June 30, 2010. Split rated AAA/Aaa is defined as a security maintaining different ratings by the NRSROs with at least one NRSRO rating the security AAA/Aaa.

Mission related investments consist primarily of Rural America Bonds, which are private placement securities purchased under the Mission Related Program approved by the FCA.

An investment is considered impaired if its fair value is less than its cost. This also applies to those securities other-than-temporarily impaired for which a credit loss has been recognized but noncredit-related losses continue to remain unrealized. The following table shows the fair value and gross unrealized losses for investments that have been in a continuous unrealized loss position aggregated by investment category at June 30, 2010 and December 31, 2009. A continuous unrealized loss position for an investment is measured from the date the impairment was first identified.

	June 30, 2010					
	Less than 12 Months		Greater than 12 Months		Total	
	Fair Value	Unrealized Losses	Fair Value	Unrealized Losses	Fair Value	Unrealized Losses

On June 30, 2010, the Bank held certain investments having continuous unrealized loss positions greater than 12 months with a fair value totaling \$1.991 billion and an unrealized loss position totaling \$135.8 million. FASB guidance for other-than-temporary impairment contemplates numerous factors in determining whether an impairment is other-than-temporary. These factors include: (1) whether or not management intends to sell the security, (2) whether it is more likely than not that management would be required to sell the security before recovering its costs, or (3) whether management expects to recover the security's entire amortized cost basis (even if there is no intention to sell). If the Bank intends to sell the security or it is more likely than not that it would be required to sell the security, the impairment loss equals the full difference between amortized cost and fair value of the security. When the Bank does not intend to sell securities in an unrealized loss position and it is not more likely than not that it would be required to sell the securities, other-than-temporary impairment loss is separated into credit loss and non-credit loss. Credit loss is defined as the shortfall of the present value of the cash flows expected to be collected in relation to the amortized cost basis.

The Bank performs periodic credit reviews, including other-than-temporary impairment analyses, on its investment securities portfolio. The objective is to quantify future possible loss of principal or interest due on securities in the portfolio. Factors considered in determining whether an impairment is other-than-temporary include among others:

(1) the length of time and the extent to which the fair value is less than cost, (2) adverse conditions specifically related to the industry, (3) geographic area and the condition of the underlying collateral, (4) payment structure of the security, (5) ratings by rating agencies, (6) the credit worthiness of bond insurers, and (7) volatility of the fair value changes. Based on the results of all analyses, the Bank has recognized total other-than-temporary impairment during 2010 of \$2.1 million in connection with ABS securities and non-agency CMO securities in its portfolio, which is included in Impairment Losses on Investments in the Statements of Income.

Since the Bank does not intend to sell these other-than-temporarily impaired debt securities and is not more likely than not to be required to sell before recovery, the other-than temporary impairment of \$2.1 million is separated into: (1) the estimated amount relating to credit loss (\$10.0 million reflected in Net Income in the Statements of Income), which is partially offset by (2) the amount relating to all other factors (\$7.9 million reflected in other comprehensive income in the Statement of Changes in Shareholders' Equity).

The Bank uses the present value of cash flows expected to be collected from the debt security to determine the amount of credit loss. This technique requires assumptions related to the underlying collateral, including default rates, degree and timing of prepayments, and loss severity. Assumptions can vary widely from security to security and are influenced by such factors as loan interest rate, geographical location of the borrower, borrower characteristics, and collateral type.

Significant inputs used in this technique to measure the amount related to the credit loss include, but are not limited to, performance indicators of the underlying assets in the security (including default rates, delinquency rates, and percentage of nonperforming assets), loan-to-collateral value ratios, third-party guarantees, current levels of subordination, vintage, geographic concentration, and credit ratings. The Bank obtains assumptions for the default rate, prepayment rate, and loss severity rate from an independent third party. Default rate assumptions are generally estimated using historical loss and performance information to estimate future defaults. The forecasted cumulative default rates used at June 30, 2010 ranged from 2% to 48% for non-agency CMO securities and from 23% to 79% for ABS securities. Prepayment rate assumptions are based on forecasted prepayments and resulted in prepayment rates that ranged from 5% to 19% for non-agency CMO securities and from 4% to 14% for ABS securities at June 30, 2010. At June 30, 2010, the loss severity rates estimated from assumptions ranged from 5% to 81% for non-agency CMO securities and from 60% to 100% for ABS securities.

For all investments other than the other-than-temporarily impaired securities discussed above, the Bank has not recognized any other-than-temporary impairment as the unrealized losses resulted from non-credit related factors. The Bank has the ability and intent to hold these investments until a recovery of unrealized losses occurs, which may be at maturity, and at this time expects to collect the full principal amount and interest due on these securities. Substantially all of these investments were in U.S. government agency securities and the Bank expects these securities would not be settled at a price less than their amortized cost. For the six months ended June 30, 2010, net unrealized gains of \$94.3 million were recognized in other comprehensive income for temporarily impaired available-for-sale investments.

The following schedule details the activity related to cumulative credit losses on investments recognized in earnings as of June 30, 2010 and 2009.

<i>(dollars in thousands)</i>	For the six months ended June 30, 2010
Beginning balance at January 1, 2010	\$ 33,159
Additions for the amount related to credit loss for which other-than-temporary impairment was not previously recognized	221
Additions for the amount related to credit loss for which other-than-temporary impairment was previously recognized	9,764
Ending balance at June 30, 2010	<u>\$ 43,144</u>

<i>(dollars in thousands)</i>	For the six months ended June 30, 2009
Beginning balance at January 1, 2009	\$ —
Adjustment to beginning balance due to application of investment impairment accounting change	6,991
Adjusted beginning balance at January 1, 2009	6,991
Additions for the amount related to credit loss for which other-than-temporary impairment was not previously recognized	6,749
Additions for the amount related to credit loss for which other-than-temporary impairment was not previously recognized	2,082
Ending balance at June 30, 2009	\$ 15,822

NOTE 3 — ALLOWANCE FOR LOAN LOSSES AND IMPAIRED LOANS

An analysis of the allowance for loan losses follows:

<i>(dollars in thousands)</i>	For the six months ended June 30,	
	2010	2009
Balance at beginning of period	\$ 32,292	\$ 44,565
Provision for (reversal of) loan losses	22,482	34,895
Charge-offs	(23,040)	(37,765)
Recoveries	163	33
Balance at end of period	\$ 31,897	\$ 41,728

Impaired loans are loans for which it is probable that all principal and interest will not be collected according to the contractual terms of the loan.

The following table presents information concerning impaired loans as of June 30,

<i>(dollars in thousands)</i>	2010	2009
Impaired loans with related allowance	\$ 88,143	\$ 22,456
Impaired loans with no related allowance	115,489	170,560
Total impaired loans	\$ 203,632	\$ 193,016
Allowance on impaired loans	\$ 19,622	\$ 22,232

The following table summarizes impaired loan information for the six months ended June 30,

<i>(dollars in thousands)</i>	2010	2009
Average impaired loans	\$ 216,399	\$ 192,214
Interest income recognized on impaired loans	681	420

NOTE 4 — FAIR VALUE MEASUREMENT

Effective January 1, 2008, the Bank adopted FASB guidance on fair value measurements. This guidance defines fair value, establishes a framework for measuring fair value, and expands the Bank's fair value disclosures for certain assets and liabilities measured at fair value on a recurring and non-recurring basis. These assets and liabilities consist primarily of investments available-for-sale, highly-liquid funds, derivative assets and liabilities, assets held in trust funds, standby letters of credit, impaired loans, other property owned, and collateral liabilities.

This guidance defines fair value as the exchange price that would be received for an asset or paid to transfer a liability in an orderly transaction between market participants in the principal or most advantageous market for the asset or liability.

This guidance establishes a fair value hierarchy for disclosure of fair value measurements to maximize the use of observable inputs, that is, inputs that reflect the assumptions market participants would use in pricing an asset or liability based on market data obtained from sources independent of the reporting entity. The valuation hierarchy is based upon the transparency of inputs to the valuation of an asset or liability as of the measurement date. A financial instrument's categorization within the valuation hierarchy is based upon the lowest level of input that is significant to the fair value measurement.

The three levels of inputs and the classification of the Bank's financial instruments within the fair value hierarchy are as follows:

Level 1

Level 1 inputs to the valuation methodology are unadjusted quoted prices for identical assets or liabilities in active markets. Level 1 assets and liabilities could include investment securities and derivative contracts that are traded in an active exchange market, in addition to certain U.S. Treasury securities that are highly-liquid and are actively traded in over-the-counter markets.

The Bank's Level 1 assets at June 30, 2010 consist of assets held in trust funds related to deferred compensation and supplemental retirement plans. The trust funds include investments in securities that are actively traded and have quoted net asset value prices that are directly observable in the marketplace.

Level 2

Level 2 inputs to the valuation methodology include quoted prices for similar assets and liabilities in active markets; quoted prices in markets that are not active; and inputs that are observable, or can be corroborated, for substantially the full term of the asset or liability. Level 2 assets and liabilities could include investment securities that are traded in active, non-exchange markets and derivative contracts that are traded in active, over-the-counter markets.

The fair value of substantially all of the Bank's investment securities is determined from third-party valuation services that estimate current market prices. Inputs and assumptions related to third-party market valuation services are typically observable in the marketplace. Such services incorporate prepayment assumptions and underlying mortgage- or asset-backed collateral information to generate cash flows that are discounted using appropriate benchmark interest rate curves and volatilities. Third-party valuations also incorporate information regarding broker/dealer quotes, available trade information, historical cash flows, credit ratings, and other market information. Such valuations represent an estimated exit price, or price to be received by a seller in active markets to sell the investment securities to a willing participant.

The fair value of the Bank's derivative financial instruments is the estimated amount to be received to sell a derivative asset or paid to transfer a derivative liability in active markets among willing participants at the reporting date. Estimated fair values are determined through internal market valuation models which use an income approach. These models incorporate benchmark interest rate curves (primarily the LIBOR swap curve), potential volatilities of future interest rate movements, and other inputs which are observable directly or indirectly in the marketplace. The Bank compares internally calculated derivative valuations to broker/dealer quotes to substantiate the results.

The Bank's Level 2 assets and liabilities at June 30, 2010 include derivative contracts and investment in U.S. government and agency mortgage-backed securities and U.S. agency debt securities, all of which have unadjusted values from third-party or internal pricing models. The underlying loans for these investment securities are residential mortgages. Level 2 assets also include federal funds sold, securities purchased under resale agreements, and other highly-liquid funds, all of which are non-exchange-traded instruments. The market value of these federal funds sold and other instruments is generally their face value, plus accrued interest, as these instruments are highly-liquid, readily convertible to cash, and short-term in nature.

The Bank's Level 2 liabilities also include collateral liabilities. The majority of derivative contracts are supported by bilateral collateral agreements with counterparties requiring the posting of collateral in the event certain dollar thresholds of credit exposure are reached. The market value of collateral liabilities is its face value plus accrued interest that approximates fair value.

Level 3

Level 3 inputs to the valuation methodology are unobservable and supported by little or no market activity. Level 3 assets and liabilities could include investments and derivative contracts whose value is determined using pricing models, discounted cash flow methodologies, or similar techniques, and other instruments for which the determination of fair value requires significant management judgment or estimation. Level 3 assets and liabilities could also include investments and derivative contracts whose price has been adjusted based on dealer quoted pricing that is different than the third-party valuation or internal model pricing.

Level 3 assets at June 30, 2010 include certain loans evaluated for impairment under FASB guidance which have fair values based upon the underlying collateral as the loans were collateral-dependent. Since the value of the collateral, less estimated costs to sell, was less than the principle balance of the loan, specific reserves were established for these loans. The fair value measurement process uses independent appraisals and other market-based information, but in many cases it also requires significant input based on management's knowledge of and judgment about current market conditions, specific issues relating to the collateral, and other matters. As a result, these fair value measurements fall within Level 3 of the hierarchy.

Level 3 assets at June 30, 2010 also include the Bank's mortgage-related asset-backed investment portfolio and non-agency CMO investment portfolio. The underlying loans for the asset-backed securities are mortgage related. The underlying loans for the non-agency CMO securities are residential mortgages. Based on the currently illiquid marketplace for these investments and the lack of marketplace information available as inputs and assumptions to the valuation process, the Bank classified the mortgage-related asset-backed investment portfolio and non-agency CMO investment portfolio as Level 3 assets. The fair value measurement of these assets involved management's judgment and was based on multiple factors including information obtained from third-party valuation services using both Level 2 and Level 3 inputs. The significant inputs for the valuation models include yields, probability of default, loss severity, and prepayment rates.

Other property owned is classified as a Level 3 asset at June 30, 2010. The fair value for other property owned is based upon the collateral fair value. Costs to sell represent transaction costs and are not included as a component of the fair value of other property owned.

Level 3 liabilities at June 30, 2010 include standby letters of credit whose market value is internally calculated based on information that is not observable either directly or indirectly in the marketplace.

Assets and Liabilities Measured at Fair Value on a Recurring Basis

The following tables present the assets and liabilities that are measured at fair value on a recurring basis at June 30, 2010 and December 31, 2009 for each of the fair value hierarchy levels:

June 30, 2010				
	Level 1	Level 2	Level 3	Total Fair Value
Assets:				
Investments available-for-sale:

Total Liabilities	\$ —	\$ 14,294	\$ 2,461	\$ 16,755

The following tables present the changes in Level 3 assets and liabilities measured at fair value on a recurring basis for the six months ended June 30, 2010 and 2009. Non-agency CMO securities were transferred from Level 2 to Level 3 assets effective March 31, 2009 as the Bank began adjusting the valuation obtained from a third party pricing service for this portfolio to reflect, in part, the valuation obtained from a cash flow modeling process. Total credit losses of \$1.4 million were included in earnings for the first quarter of 2009 for non-agency CMOs determined to be other-than-temporarily impaired. The Bank had no other transfers of assets or liabilities into or out of Level 1 or Level 2 during the first six months of 2009 and the Bank had no transfers of assets or liabilities into or out of Level 1 or Level 2 during the first six months of 2010.

<i>(dollars in thousands)</i>	Asset-Backed Investment Securities	Non- Agency CMOs	Standby Letters Of Credit
Balance at January 1, 2010	\$ 47,465	\$ 360,027	\$ 2,461

Other property owned	—	—	27,969	27,969	—

NOTE 5 — DISCLOSURES ABOUT FAIR VALUE OF FINANCIAL INSTRUMENTS

The following table presents the carrying amounts and fair values of the Bank's financial instruments at June 30, 2010 and December 31, 2009.

Quoted market prices are generally not available for certain Systemwide Debt securities, as described below. Accordingly, fair values are based on judgments regarding anticipated cash flows, future expected loss experience, current economic conditions, risk characteristics of various financial instruments, and other factors. These estimates involve uncertainties and matters of judgment, and therefore cannot be determined with precision. Changes in assumptions could significantly affect the estimates.

<i>(dollars in thousands)</i>	June 30, 2010		December 31, 2009	
	Carrying Amount	Estimated Fair Value	Carrying Amount	Estimated Fair Value
Financial assets:				
Loans, net of allowance	\$ 20,694,745	\$ 21,022,855	\$ 21,295,027	\$ 21,509,619
Derivative assets	76,122	76,122	70,041	70,041
Cash and cash equivalents	1,439,519	1,439,519	938,884	938,884
Investment securities	8,213,333	8,295,502	8,226,209	8,264,765
Assets held in trust funds	2,814	2,814	2,825	2,825
Financial liabilities:				
Systemwide Debt Securities	\$ 28,495,880	\$ 28,666,452	\$ 28,694,013	\$ 28,711,990
Derivative liabilities	—	—	229	229

A description of the methods and assumptions used to estimate the fair value of each class of the Bank's financial instruments for which it is practicable to estimate that value follows:

- A. **Loans:** Because no active market exists for the Bank's loans, fair value is estimated by discounting the expected future cash flows using the Bank's current interest rates at which similar loans currently would be made to borrowers with similar credit risk.

For purposes of determining fair value of accruing loans, the loan portfolio is segregated into pools of loans with homogeneous characteristics based upon repricing and credit risk. Expected future cash flows and interest rates reflecting appropriate credit risk are separately determined for each individual pool. Fair values of loans in a nonaccrual status are estimated to be the carrying amount of the loan less specific reserves. The carrying value of accrued interest approximates its fair value.

- B. **Cash and Cash Equivalents:** The carrying value is primarily utilized as a reasonable estimate of fair value.

- C. **Investment Securities:** Fair value is primarily based upon prices obtained from a third party valuation service. See additional information in Note 4.

- D. **Systemwide Debt Securities:** Bonds and notes are not regularly traded; thus, quoted market prices are not available. Fair value of these instruments is estimated by discounting expected future cash flows based on the quoted market price of similar maturity Treasury notes, assuming a constant estimated spread relationship between Systemwide bonds and notes and comparable Treasury notes.

- E. **Derivative Instruments:** The fair value of derivatives is the estimated amount to be received or paid to replace the instruments at the reporting date, considering current and projected interest rates. Where actively quoted market prices do not exist, estimated fair values are determined through internal market valuation models. See additional information in Note 8.

- F. **Assets Held In Trust Funds:** See Note 4 for discussion of estimation of fair value for these assets.

NOTE 6 — COMMITMENTS AND CONTINGENT LIABILITIES

Under the Farm Credit Act of 1971, each Farm Credit System bank is primarily liable for its portion of Systemwide bond and discount note obligations. Additionally, the banks are jointly and severally liable for the bonds and notes of the other Farm Credit System banks. The bonds and notes of the System totaled \$176.833 billion at June 30, 2010.

There are no material claims pending against the Bank in which money damages are asserted.

NOTE 7 — EMPLOYEE BENEFIT PLANS

The following is a table of retirement and other postretirement benefit expenses for the Bank:

<i>(dollars in thousands)</i>	For the six months ended June 30,	
	2010	2009
Pension	\$ 4,527	\$ 4,242
401k	467	440
Other postretirement benefits	495	442
Total	<u>\$ 5,489</u>	<u>\$ 5,124</u>

The following is a table of retirement and other postretirement benefit contributions for the Bank. Projections are based upon actuarially determined amounts as of the most recent measurement date of December 31, 2009.

<i>(dollars in thousands)</i>	Actual YTD Through 6/30/10	Projected Contributions for Remainder Of 2010	Projected Total Contributions 2010
Pensions	\$ 126	\$ 7,146	\$ 7,272
Other postretirement benefits	488	250	738
Total	<u>\$ 614</u>	<u>\$ 7,396</u>	<u>\$ 8,010</u>

Contributions in the above table include allocated estimates of funding for multi-employer plans in which the Bank participates. These amounts may change when a total funding amount and allocation is determined by the respective Plans' Sponsor Committees. Also, market conditions could impact discount rates and return on plan assets which could change contributions necessary before the next plan measurement date of December 31, 2010.

Further details regarding employee benefit plans are contained in the 2009 Annual Report to Shareholders.

NOTE 8 – DERIVATIVE FINANCIAL INSTRUMENTS AND HEDGING ACTIVITIES

Effective January 1, 2009, the Bank adopted FASB guidance, "Disclosures about Derivative Instruments and Hedging Activities," which amends and expands the disclosure requirements for derivative instruments and for hedging activities previously required.

The Bank's goal is to minimize interest rate sensitivity by managing the repricing characteristics of assets and liabilities so that the net interest margin is not adversely affected by movements in interest rates. The Bank maintains an overall interest rate risk management strategy that may incorporate the use of derivative instruments to lower cost of funding or to reduce interest rate risk. Currently, the primary derivative type used by the Bank is

interest rate swaps which convert fixed interest rate debt to a lower floating interest rate than was achievable from issuing floating rate debt with identical repricing characteristics.

As a result of interest rate fluctuations, interest income and interest expense related to hedged variable-rate assets and liabilities, respectively, will increase or decrease. Another result of interest rate fluctuations is that hedged fixed-rate assets and liabilities will appreciate or depreciate in market value. The effects of any earnings variability or unrealized changes in market value are expected to be substantially offset by the Bank's gains or losses on the derivative instruments that are linked to these hedged assets and liabilities. The Bank considers its strategic use of derivatives to be a prudent method of managing interest rate sensitivity, as it prevents earnings from being exposed to undue risk posed by changes in interest rates.

The Bank may enter into derivatives, particularly interest rate swaps, to lower funding costs, to allow it to diversify sources of funding, or to alter interest rate exposures arising from mismatches between assets and liabilities. As mentioned previously, interest rate swaps enable the Bank to raise long-term borrowings at fixed rates and swap them into floating rates that are lower than those available to the Bank if floating rate borrowings were made directly. Under interest rate swap arrangements, the Bank agrees with other parties to exchange, at specified intervals, payment streams calculated on a specified notional principal amount, with at least one stream based on a specified floating rate index. The Bank may also purchase interest rate derivatives such as caps in order to reduce the impact of rising interest rates on its floating-rate debt and floors in order to reduce the impact of falling interest rates on its floating-rate assets.

The primary type of derivative instrument used and the amount of notional activity for the year ended June 30, 2010 is summarized in the following table:

(dollars in millions)	Receive-Fixed Swaps
Balance at beginning of period	\$ 1,373
Additions	50
Maturities/amortization	(100)
Terminations	—
Balance at end of period	<u>\$ 1,323</u>

By using derivative instruments, the Bank exposes itself to credit and market risk. If a counterparty fails to fulfill its performance obligations under a derivative contract, the Bank's credit risk will equal the fair value gain in the derivative. Generally, when the fair value of a derivative contract is positive, this indicates that the counterparty owes the Bank, thus creating a repayment risk for the Bank. When the fair value of the derivative contract is negative, the Bank owes the counterparty and, therefore, assumes no repayment risk.

To minimize the risk of credit losses, the Bank deals with counterparties that have an investment grade credit rating from a major rating agency and also monitors the credit standing of and levels of exposure to individual counterparties. The estimated gross credit risk exposure at June 30, 2010 of \$76.1 million was with eight counterparties and represented approximately 5.75 percent of the total notional amount of interest rate swaps. The Bank held \$24.2 million of interest-bearing cash collateral posted by one counterparty related to these swaps. The Bank does not anticipate nonperformance by any of these counterparties. The estimated gross credit risk exposure at December 31, 2009 of \$70.0 million was with eight counterparties and represented approximately 5.08 percent of the total notional amount of interest rate swaps. The Bank held \$14.1 million of interest-bearing cash collateral posted by one counterparty related to these swaps. The Bank typically enters into master agreements that contain netting provisions. These provisions allow the Bank to require the net settlement of covered contracts with the same counterparty in the event of default by the counterparty on one or more contracts. A number of swaps are supported by collateral arrangements with counterparties. At June 30, 2010, the Bank had not posted collateral with respect to any of these arrangements.

The Bank's derivative activities are monitored by its Asset-Liability Management Committee (ALCO) as part of the Committee's oversight of the Bank's asset/liability and treasury functions. The Bank's ALCO is responsible for approving hedging strategies that are developed within parameters established by the Bank's board of directors

through the Bank's analysis of data derived from financial simulation models and other internal and industry sources. The resulting hedging strategies are then incorporated into the Bank's overall interest rate risk-management strategies.

Fair-Value Hedges

For derivative instruments designated as a fair value hedges, the gains or losses on the derivative as well as the offsetting loss or gain on the hedged item attributable to the hedged risk are recognized in current earnings. The Bank includes the gain or loss on the hedged items in the same line item (interest expense) as the offsetting loss or gain on the related interest rate swaps. The amount of the gain on interest rate swaps recognized in interest expense for the six months ended June 30, 2010 was \$6.1 million, while the amount of the loss on the Systemwide Debt Securities was (\$6.1) million. Gains and losses on each derivative representing either hedge ineffectiveness or hedge components excluded from the assessment of effectiveness are recognized in current earnings.

<i>(dollars in thousands)</i>	Balance Sheet Classification – Assets	6/30/10 Fair Value	Balance Sheet Classification – Liabilities	6/30/10 Fair Value
Derivatives designated as hedging instruments:				
Receive-fixed swaps	Other Assets	\$ 76,122	Other Liabilities	\$ –
Total		\$ 76,122		\$ –

<i>(dollars in thousands)</i>	Balance Sheet Classification – Assets	6/30/09 Fair Value	Balance Sheet Classification – Liabilities	6/30/09 Fair Value
Derivatives designated as hedging instruments:				
Receive-fixed swaps	Other Assets	\$ 82,439	Other Liabilities	\$ 164
Total		\$ 82,439		\$ 164

The following table sets forth the effect of derivative instruments on the Statement of Income for the six month period ended June 30, 2009. Amount presented is net. The Bank had no gain or loss on derivatives recognized in the Income Statement for the six months ended June 30, 2010.

<i>(dollars in thousands)</i>	Location of Gain or (Loss) Recognized in the Statement of Income	Amount of Gain or (Loss) Recognized in the Statement of Income
Derivatives – Fair Value Hedging Relationships:		
Receive-fixed swaps	Noninterest Income	\$305
Total		\$305

NOTE 9 – DISTRICT MERGER ACTIVITY

In May 2010, the Boards of Directors of Farm Credit of North Florida, ACA and Farm Credit of South Florida, ACA (collectively referred to as the "Two Merger Associations") approved a proposed Plan of Merger ("Merger"). The Merger has been approved by AgFirst and has been submitted to the Farm Credit Administration (FCA) for approval. Upon FCA approval, the Merger will be submitted to shareholders of the Two Merger Associations for their review and approval. Pending the necessary approvals, the Merger is anticipated to be effective January 1, 2011.

In July 2010, the Boards of Directors of Farm Credit of North Florida, ACA, Farm Credit of South Florida, ACA, and Farm Credit of Southwest Florida, ACA (collectively referred to as the "Three Merger Associations") signed a Letter of Intent to merge. The Letter of Intent to merge allows the Three Merger Associations to explore the

benefits of a merger. If Boards of the Three Merger Associations agree to proceed with a merger, a Plan of Merger (“Merger”) will be prepared and submitted to the Bank and the FCA for approval. Upon approval by the Bank and FCA, the Merger will be submitted to shareholders of the Three Merger Associations for their review and approval. The Letter of Intent to merge contains a proposed merger effective date of January 1, 2011 and would supersede the first Merger discussed above pending all necessary approvals.

NOTE 10 – SUBSEQUENT EVENTS

The Bank has evaluated subsequent events and except for the merger activity discussed in Note 9 above, has determined there are no other subsequent events requiring disclosure through August 6, 2010, which is the date the financial statements were issued.
