Report on Internal Control Over Financial Reporting

The Bank's principal executives and principal financial officers, or persons performing similar functions, are responsible for establishing and maintaining adequate internal control over financial reporting for the Bank's Financial Statements. For purposes of this report, "internal control over financial reporting" is defined as a process designed by, or under the supervision of the Bank's principal executives and principal financial officers, or persons performing similar functions, and effected by its Board of Directors, management and other personnel. This process provides reasonable assurance regarding the reliability of financial reporting information and the preparation of the Financial Statements for external purposes in accordance with accounting principles generally accepted in the United States of America.

Internal control over financial reporting includes those policies and procedures that: (1) pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of the assets of the Bank, (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial information in accordance with accounting principles generally accepted in the United States of America, and that receipts and expenditures are being made only in accordance with authorizations of management and directors of the Bank, and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the Bank's assets that could have a material effect on its Financial Statements.

The Bank's management has completed an assessment of the effectiveness of internal control over financial reporting as of March 31, 2013. In making the assessment, management used the framework in *Internal Control*—*Integrated Framework*, promulgated by the Committee of Sponsoring Organizations of the Treadway Commission, commonly referred to as the "COSO" criteria.

Based on the assessment performed, the Bank concluded that as of March 31, 2013, the internal control over financial reporting was effective based upon the COSO criteria. Additionally, based on this assessment, the Bank determined that there were no material weaknesses in the internal control over financial reporting as of March 31, 2013.

Management's Discussion and Analysis of Financial Condition and Results of Operations

The following discussion reviews the financial condition and results of operations of AgFirst Farm Credit Bank (AgFirst or Bank) as of and for the three month period ended March 31, 2013. These comments should be read in conjunction with the accompanying financial statements, the Notes to the Financial Statements, and the 2012 Annual Report of AgFirst Farm Credit Bank. AgFirst and its related associations (Associations or District Associations) are collectively referred to as the District. The accompanying financial statements were prepared under the oversight of the Audit Committee of the AgFirst Board of Directors.

Key ratios and data reported below, and in the accompanying financial statements, address the financial performance of AgFirst. However, the three months results of operations may not be indicative of an entire year due to the seasonal nature of a portion of AgFirst's business.

FORWARD-LOOKING INFORMATION

Certain sections of this quarterly report contain forward-looking statements. These statements are not guarantees of future performance and involve certain risks, uncertainties, and assumptions that are difficult to predict. Words such as "anticipates," "believes," "could," "estimates," "may," "should," "will," or other variations of these terms are intended to identify the forward-looking statements. These statements are based on assumptions and analyses made in light of experience and other historical trends, current conditions, and expected future developments. However, actual results and developments may differ materially from AgFirst's expectations and predictions due to a number of risks and uncertainties, many of which are beyond AgFirst's control. These risks and uncertainties include, but are not limited to:

- political, legal, regulatory, financial markets, and economic conditions and developments in the United States and abroad;
- economic fluctuations in the agricultural, rural infrastructure, international, and farm-related business sectors, as well as in the general economy;
- weather-related, disease, and other adverse climatic or biological conditions that periodically occur that impact agricultural productivity and income of District borrowers;
- changes in United States government support of the agricultural industry and the Farm Credit System (System) as a government-sponsored enterprise (GSE), as well as investor and rating agency reactions to events involving the U.S. government, GSEs and other financial institutions;
- actions taken by the Federal Reserve System in implementing monetary and fiscal policy, as well as other
 policies and actions of the Federal government that impact the financial services industry and the debt
 markets; and
- cyber-security risks, including "denial of service," "hacking," and "identity theft," that could adversely affect the Bank's business and financial performance, or reputation.

FINANCIAL CONDITION

Loan Portfolio

AgFirst's loan portfolio consists of direct loans to District Associations (Direct Notes), loan participations/syndications purchased, Correspondent Lending loans (primarily first lien rural residential mortgages), and loans to Other Financing Institutions (OFIs) as shown below:

(dollars in thousands)	March 31,	2013	December 3	31, 2012	March 31, 2012		
Direct Notes	\$ 13,176,373	67.41%	\$ 13,833,602	68.45%	\$ 13,471,353	68.99%	
Participations/Syndications purchased, net	3,998,531	20.45	4,037,770	19.98	3,855,860	19.75	
Correspondent Lending	2,305,034	11.79	2,277,400	11.27	2,191,632	11.22	
Loans to OFIs	67,578	0.35	60,479	0.30	6,900	0.04	
Total	\$ 19,547,516	100.00%	\$ 20,209,251	100.00%	\$ 19,525,745	100.00%	

Total loans outstanding were \$19.548 billion at March 31, 2013, a decrease of \$661.7 million, or 3.27 percent, compared to total loans outstanding at December 31, 2012. The decline in loan volume since 2012 year end is primarily due to Bank patronage payments to Associations of approximately \$172.8 million, which were applied to the Association Direct Notes at the beginning of 2013, and the seasonal nature of District lending activity as borrowers typically pay down loans during the first quarter using proceeds from crop sales. In addition, loan demand remains weak due to the slow recovery of the general economy. This has resulted in lower production and capital investment in certain sectors. Relatively high unemployment and uncertainty of existing employment has had a negative impact on certain borrowers dependent on non-farm income. Future loan demand is difficult to predict; however, it is expected to remain weak through 2013.

Credit Quality

Credit quality continues to be impacted by prolonged weakness in the economy as shown below:

Total Loan Portfolio Credit Quality as of:

Classification	March 31, 2013	December 31, 2012	March 31, 2012
Acceptable	89.59%	91.03%	87.35%
OAEM *	4.67%	3.19%	9.63%
Substandard/Doubtful/Loss	5.74%	5.78%	3.02%

^{*}Other Assets Especially Mentioned

For a discussion of the increase in the other assets especially mentioned classification since year end, see the *Direct Notes* section below. Loan portfolio credit quality at the producer level reflected minor improvement. Most distressed property sales are occurring at or near appraised values, indicating that values have stabilized. Production farm land maintained its value throughout the financial downturn. High commodity prices for grains during 2012 were very beneficial to row crop farmers. Florida continues to be challenged with concentrations in landscape/tree nurseries and land in transition. However, improved housing starts during the first quarter of 2013 could positively impact housing-related industries such as building products, timber, sawmills, landscape nurseries, and sod operations.

The Bank will likely purchase high risk assets from a District Association during the third quarter of 2013 under the terms of a financial assistance agreement. This is not expected to have a material adverse effect on either the financial condition or future operating results of the Bank. See Note 5, *Commitments and Contingent Liabilities*, in the Notes to the Financial Statements for further information.

The credit conditions discussed above affect the credit quality of the Bank's participation/syndication loan portfolio directly. They also affect the credit quality of loan portfolios and earnings performance of the individual District Associations, which in turn is reflected in the quality of the Bank's Direct Notes. Slow economic growth will have an impact on credit quality for some time. Although credit quality is generally stabilizing, it will take time to fully

resolve some problem assets due to their dependency on general economic conditions, including employment, the housing market, and real estate values.

Direct Notes

AgFirst's primary business is to provide funding, operational support, and technology services to District Associations. Each Association, in addition to the Bank, is a federally chartered instrumentality of the United States and is regulated by the Farm Credit Administration (FCA). AgFirst has a revolving line of credit, referred to as a Direct Note, in place with each of the District Associations. Each of the Associations funds its lending and general corporate activities primarily by borrowing under its Direct Note. Lending terms are specified in a separate General Financing Agreement (GFA) between AgFirst and each Association. Each GFA contains minimum borrowing base margin, capital, and earnings requirements that must be maintained by the Association.

At March 31, 2013, the total principal amount outstanding under Direct Notes was \$13.176 billion, a decrease of \$657.2 million, or 4.75 percent, compared to December 31, 2012. As previously mentioned, liquidation of accrued patronage, borrower payment seasonality, and the weak economy were the primary reasons for the decline in Direct Note volume from December to March.

Credit quality statistics for the Direct Note portfolio are shown in the following chart:

Direct Note Credit Quality as of:

Classification	March 31, 2013	December 31, 2012	March 31, 2012
Acceptable	87.77%	90.12%	85.68%
OAEM *	5.74%	3.39%	11.41%
Substandard/Doubtful/Loss	6.49%	6.49%	2.91%

^{*}Other Assets Especially Mentioned

As of March 31, 2013, fourteen of the nineteen District Associations' Direct Notes, representing 87.77 percent of the Direct Note portfolio, were classified acceptable. Three of the remaining Direct Notes, representing 5.74 percent of the portfolio, were classified as Other Assets Especially Mentioned (OAEM) and two of the Direct Notes, representing 6.49 percent of the portfolio, were classified as substandard (adverse). During the quarter ended March 31, 2013, the classification of the Direct Note for one Association was moved from acceptable to OAEM.

None of the Direct Notes, including those classified as substandard (adverse), are considered impaired. Impaired loans are loans for which it is probable that all principal and interest will not be collected according to the contractual terms of the loan. Presently, collections of the full Direct Note amounts due for the two Associations classified as substandard are expected in accordance with the contractual terms of the debt arrangements, and no allowance has been recorded for Direct Notes. All assets of the various Associations are pledged as collateral for their respective Direct Notes. In the opinion of management, all Association Direct Notes are adequately collateralized. The risk funds of an Association, including both capital and the allowance for loan losses, also protect the interest of the Bank should a Direct Note default. At March 31, 2013, total assets of the two Associations with Direct Notes classified as substandard were \$1.145 billion and their total risk funds were \$283.1 million. Also at March 31, 2013, total substandard loans, including accrued interest, of these two Associations were \$181.0 million compared to their total substandard Direct Notes of \$856.5 million.

As of March 31, 2013, four District Associations, with combined assets of approximately \$2.850 billion, were operating under written supervisory agreements with the FCA. Those agreements require the District Associations to take corrective actions with respect to specific areas of their operations. These enforcement actions are not expected to have a significant impact on the Bank's or District's financial condition or results of operations. Also, as of March 31, 2013, one District Association was operating under a special credit agreement pursuant to its GFA as a result of a GFA covenant violation.

Participations/Syndications

AgFirst has a Capital Markets Unit that purchases and sells loan participations and syndications. As of March 31, 2013, the participations/syndications portfolio totaled \$3.999 billion, a decrease of \$39.2 million, or 0.97 percent, from December 31, 2012. As with the Direct Notes, borrower demand is anticipated to remain moderate through 2013.

AgFirst employs a number of management techniques to limit credit risk, including underwriting standards, limits on the amounts of loans purchased from a single originator, and maximum hold positions to a single borrower and commodity. Although the participations/syndications portfolio is comprised of a small number of relatively large loans, it is diversified both geographically and on a commodity basis. Management makes adjustments to credit policy and underwriting standards when appropriate as a part of the ongoing risk management process.

Improving credit quality statistics for the participations/syndications portfolio are shown in the following chart:

Participations/Syndications Credit Quality as of:

Classification	March 31, 2013	December 31, 2012	March 31, 2012
Acceptable	89.46%	89.03%	85.96%
OAEM *	3.86%	4.28%	8.91%
Substandard/Doubtful/Loss	6.68%	6.69%	5.13%

^{*}Other Assets Especially Mentioned

Correspondent Lending

AgFirst also maintains a Correspondent Lending Unit, which consists primarily of first lien residential mortgages. As of March 31, 2013, the correspondent lending portfolio totaled \$2.305 billion. From December 31, 2012 to March 31, 2013, this portfolio increased \$27.6 million, or 1.21 percent.

Essentially all loans in the correspondent lending portfolio are guaranteed by the Federal National Mortgage Association (Fannie Mae) and/or the Federal Agricultural Mortgage Corporation (Farmer Mac), thereby limiting credit risk to AgFirst. The guarantees are in the form of Long-Term Standby Commitments to Purchase, which give AgFirst the right to deliver delinquent loans to the guaranter at par. At March 31, 2013, 99.88 percent of the correspondent lending portfolio was classified as acceptable and 0.12 percent was classified as OAEM.

Nonaccrual Loans

Nonaccrual loans represent all loans for which there is a reasonable doubt as to the collection of principal and/or interest under the contractual terms of the loan. Nonaccrual loans for the Bank at March 31, 2013 were \$80.5 million compared to \$80.2 million at December 31, 2012. Nonaccrual loans increased \$243 thousand during the three months ended March 31, 2013, due primarily to \$5.8 million of loan balances transferred to nonaccrual status, offset by \$1.9 million transferred to other property owned and \$1.5 million repayments. The ten largest nonaccrual borrower relationships accounted for 70.37 percent of the total nonaccrual balance. At March 31, 2013, total nonaccrual loans were primarily classified in the nursery/greenhouse (28.12 percent of the total), forestry (25.12 percent), and ethanol (13.52 percent) segments. Some of these nonaccrual loans are secured by real estate, which has been negatively impacted by the current economic environment as discussed previously. Nonaccrual loans were 0.41 percent and 0.40 percent of total loans outstanding at March 31, 2013 and December 31, 2012, respectively.

Troubled Debt Restructurings

A troubled debt restructuring (TDR) occurs when a borrower is experiencing financial difficulties and a concession is granted to the borrower that the Bank would not otherwise consider. Concessions are granted to borrowers based on either an assessment of the borrower's ability to return to financial viability or a court order. The concessions can be in the form of a modification of terms, rates, or amounts owed. Acceptance of other assets and/or equity as payment may also be considered a concession. The type of alternative financing granted is chosen in order to minimize the loss incurred by the Bank. TDRs increased \$2.0 million since December 31, 2012 and totaled \$40.0 million at March 31, 2013. TDRs were comprised of \$4.4 million of accruing restructured loans and \$35.6 million of nonaccruing restructured loans. Restructured loans were primarily in the forestry (33.13 percent of the total), ethanol (27.17 percent), and other real estate (11.07 percent) segments.

Other Property Owned

Other property owned (OPO) consists primarily of assets once pledged as loan collateral that were acquired through foreclosure or deeded to the Bank (or a lender group) in satisfaction of secured loans. OPO may be comprised of real

estate, equipment, and equity interests in companies or partnerships. OPO decreased \$4.1 million since December 31, 2012 and totaled \$15.3 million at March 31, 2013. The decrease was due to OPO disposals of \$5.0 million and net write-downs of \$1.1 million. Disposals primarily included one land holding totaling \$4.4 million. Net write-downs were comprised primarily of two land holdings totaling \$1.1 million. Offsetting this decrease were transfers from nonaccrual of \$1.9 million. The four largest OPO holdings at March 31, 2013 were an ethanol plant at \$4.5 million (29.52 percent of the total) and three land holdings totaling \$4.5 million (29.47 percent).

Allowance for Loan Losses

The Bank maintains an allowance for loan losses at a level management considers adequate to provide for probable and estimable credit losses within the loan portfolio as of each reported balance sheet date. The allowance for loan losses was \$44.9 million at March 31, 2013, as compared with \$44.5 million at December 31, 2012. Activity within the allowance for the three months ended March 31, 2013 was minimal and included increases for the provision for loan loss of \$334 thousand and recoveries of \$47 thousand, offset by loan charge-offs of \$61 thousand, as their uncollectability became more measurable and apparent during the three month period. The allowance at March 31, 2013 included specific reserves of \$24.6 million (54.89 percent of the total) and general reserves of \$20.2 million (45.11 percent). None of the allowance relates to the Direct Note portfolio. The total allowance at March 31, 2013 was comprised primarily of reserves for the nursery/greenhouse (30.70 percent of the total), forestry (14.69 percent), and non-farm income (11.54 percent) segments. See Note 3, *Loans and Allowance for Loan Losses*, in the Notes to the Financial Statements for further information. See *Provision for Loan Losses* section below for details regarding increases to the allowance from provision expense.

Liquidity and Funding Sources

One of AgFirst's primary responsibilities is to maintain sufficient liquidity to fund the lending operations of the District Associations, in addition to its own needs. Along with normal cash flows associated with lending operations, AgFirst has two primary sources of liquidity: the capacity to issue Systemwide Debt Securities through the Federal Farm Credit Banks Funding Corporation; and its cash and investments portfolio. The Bank also maintains several lines of credit with commercial banks, as well as securities repurchase agreement facilities.

The U.S. government does not guarantee, directly or indirectly, Systemwide Debt Securities. However, the Farm Credit System, as a GSE, has benefited from broad access to the domestic and global capital markets. This access has provided the System with a dependable source of competitively priced debt which is critical for supporting the System's mission of providing credit to agriculture and rural America. However, concerns regarding the government's borrowing limit and budget imbalances have further highlighted the risks to the System relating to the U.S. fiscal situation. These risks include the implied link between the credit rating of the System and the U.S. Government given the System's status as a GSE.

AgFirst's primary source of liquidity comes from its ability to issue Systemwide Debt Securities, which are the general unsecured joint and several obligations of the System banks. AgFirst continually raises funds in the debt markets to support its mission, to repay maturing Systemwide Debt Securities, and to meet other obligations. As a GSE, AgFirst has access to the nation's and world's debt and capital markets.

During the third quarter of 2012, Standard & Poor's Ratings Services, Moody's Investor Service, and Fitch Ratings affirmed their long-term debt rating for the System at AA+, Aaa, and AAA and their short-term debt rating at A-1+, P-1, and F-1, respectively. Their outlook on the long-term debt rating of the System remained negative due to the negative outlook on the long-term rating for the U.S. Any future negative changes to the System's credit ratings and/or outlook could increase borrowing costs and limit access to the debt capital markets. Any future downgrades could also reduce earnings by increasing debt funding costs and have a material adverse effect on liquidity, ability to conduct normal business operations, and the Bank's overall financial condition and results of operations. However, AgFirst anticipates continued access to funding necessary to support the District's and Bank's needs.

At March 31, 2013, AgFirst had \$25.221 billion in total debt outstanding compared to \$26.287 billion at December 31, 2012. Total interest-bearing liabilities decreased primarily due to the decrease in liquidity investments and the decline in loan volume as discussed elsewhere in this report, which when combined with an increase in retained earnings, reduced funding requirements.

Cash and cash equivalents, which decreased \$391.3 million from December 31, 2012 to a total of \$481.8 million at March 31, 2013, consist primarily of cash on deposit and money market securities that are short term in nature (from overnight maturities to maturities that range up to 90 days). Cash decreased due primarily to lower liquidity needs for upcoming maturing debt between the periods.

Investment securities totaled \$7.415 billion, or 26.73 percent of total assets at March 31, 2013, compared to \$7.484 billion, or 25.91 percent, as of December 31, 2012. Investment securities decreased \$69.1 million (0.92 percent), compared to December 31, 2012. Management maintains the available-for-sale liquidity investment portfolio size generally proportionate with that of the loan portfolio and within regulatory and policy guidelines. In order to maintain the portfolio size within regulatory limits, during the quarter ended March 31, 2013, the Bank sold \$114.6 million Agency mortgage backed securities which resulted in a gain of \$7.6 million.

Investment securities classified as being available-for-sale totaled \$6.671 billion at March 31, 2013. Available-for-sale investments at March 31, 2013 included \$4.679 billion in Agency collateralized mortgage obligations (CMOs), \$1.759 billion in Agency adjustable rate mortgages, \$199.2 million in non-agency CMOs, and \$33.8 million in asset-backed securities. Since the majority of the portfolio is invested in agency securities, the portfolio is highly liquid and potential credit loss exposure is limited.

As of March 31, 2013, AgFirst exceeded all applicable regulatory liquidity requirements. FCA regulations require a liquidity policy that establishes a minimum "coverage" level of 90 days. "Coverage" is defined as the number of days that maturing debt could be funded with eligible cash, cash equivalents, and available-for-sale investments maintained by the Bank. At March 31, 2013, AgFirst's coverage was 240 days, compared to 218 days at December 31, 2012. The Bank's cash and cash equivalents position provided 25 days of the total liquidity coverage. Investment securities fully backed by the U.S. government provided an additional 215 days of liquidity. Cash provided by the Bank's operating activities, primarily generated from net interest income in excess of operating expenses and maturities in the loan portfolio, is an additional source of liquidity for the Bank that is not reflected in the coverage calculation.

Net unrealized gains related to the available-for-sale securities were \$176.5 million at March 31, 2013, compared to \$174.5 million at December 31, 2012. These net unrealized gains are reflected in Accumulated Other Comprehensive Income (AOCI) in the Financial Statements. The net unrealized gains stem from normal market factors such as the current interest rate environment.

The Bank performs periodic credit reviews, including other-than-temporary impairment analyses, on its entire investment securities portfolio. Based on the results of all analyses, the Bank recognized other-than-temporary credit related impairment of \$1.1 million on non-agency securities in its portfolio for the three months ended March 31, 2013, which was included in Net Other-Than-Temporary Impairment Losses on Investments in the Statements of Income. See Note 2, *Investment Securities*, in the Notes to the Financial Statements for further information.

Capital Resources

Total shareholders' equity increased \$116.7 million (5.08 percent) from December 31, 2012 to a total of \$2.415 billion at March 31, 2013. This increase is primarily attributed to 2013 unallocated retained earnings from net income of \$121.2 million and increases of \$1.9 million in net unrealized gains during 2013 on investments available-for-sale. Offsetting the increases were stock/participation certificate net retirements of \$5.7 million.

On April 15, 2013, the AgFirst Board of Directors gave final approval to exercise redemption and cancellation rights on the entire \$150.0 million of Perpetual Non-cumulative Preferred Stock issued October 14, 2003. The stock will be redeemed May 15, 2013 at its par value together with accrued and unpaid dividends.

Regulatory Capital Ratios

AgFirst's regulatory ratios are shown in the following table:

	Regulatory Minimum	3/31/13	12/31/12	3/31/12
Permanent Capital Ratio	7.00%	22.21%	23.58%	21.60%
Total Surplus Ratio	7.00%	22.17%	23.55%	21.57%
Core Surplus Ratio	3.50%	19.42%	20.04%	17.74%
Net Collateral Ratio	103.00%	107.88%	107.03%	107.06%

FCA sets minimum regulatory capital requirements for System banks and associations. Capital adequacy is evaluated using a number of regulatory ratios. According to the FCA regulations, each institution's permanent capital ratio is calculated by dividing permanent capital by a risk-adjusted asset base. The total surplus ratio is calculated by dividing total surplus by a risk-adjusted asset base and the core surplus ratio is calculated by dividing core surplus by a risk-adjusted asset base. Risk-adjusted assets refer to the total dollar amount of the institution's assets adjusted by an appropriate credit conversion factor as defined by regulation. Generally, higher credit conversion factors are applied to assets with more inherent risk. Unlike the permanent capital, total surplus and core surplus ratios, the net collateral ratio does not incorporate any risk-adjusted weighting of assets. The net collateral ratio is calculated by dividing the Bank's collateral, as defined by FCA regulations, by total liabilities. The permanent capital, total surplus, and core surplus ratios are calculated using three-month average daily balances and the net collateral ratio is calculated using period end balances. For all periods presented, AgFirst exceeded minimum regulatory standards for all of the ratios.

The Bank's permanent capital, total surplus, and core surplus ratios decreased at March 31, 2013 as compared to December 31, 2012. These ratios are calculated using a three month average daily balance for both capital and assets. Therefore, reductions in capital in December related to accrued patronage and a decrease in the minimum Association stock requirement from 1.75 percent to 1.40 percent of Association Direct Note balances had minimal impact on the December 31, 2012 ratios, but fully impacted the ratios at March 31, 2013.

RESULTS OF OPERATIONS

Net income for the three months ended March 31, 2013 was \$121.2 million, compared to \$123.0 million for the three months ended March 31, 2012, a decrease of \$1.8 million, or 1.48 percent.

Key Results of Operations Comparisons

	Annualized for the three months ended March 31, 2013	For the year ended December 31, 2012	Annualized for the three months ended March 31, 2012
Return on average assets	1.73%	1.63%	1.73%
Return on average shareholders' equity	20.81%	20.06%	22.60%
Net interest income as a percentage of average earning assets	2.09%	2.19%	2.29%
Net (charge-offs) recoveries to average loans	-%	0.01%	0.06%

Net Interest Income

Net interest income for the three months ended March 31, 2013 was \$140.3 million compared to \$156.2 million for the same period of 2012, a decrease of \$16.0 million or 10.21 percent. The net interest margin was 2.09 percent and 2.29 percent in the current year and prior year three month periods, respectively, a decrease of 20 basis points. The decrease was primarily the result of lower earning asset yields resulting from the declining interest rate environment.

Over time, as interest rates change and as assets prepay or reprice, the positive impact on the net interest margin that the Bank has experienced over the last several years from calling debt will diminish. The three month period ended March 31, 2013 compared with the corresponding period in 2012, was also negatively impacted by lower average balances, driven primarily by a reduction in loan volume as previously discussed.

The following table illustrates the changes in net interest income:

	March 31, 2013 vs. March 31, 20									
	Increase (decrease) due to changes in:									
(dollars in thousands)		Volume		Rate		Total				
Interest Income: Loans Investments & Cash Equivalents	\$	(128) (942)	\$	(16,800) (7,205)	\$	(16,928) (8,147)				
Total Interest Income	\$	(1,070)	\$	(24,005)	\$	(25,075)				
Interest Expense: Interest-Bearing Liabilities	\$	(984)	\$	(8,137)	\$	(9,121)				
Changes in Net Interest Income	\$	(86)	\$	(15,868)	\$	(15,954)				

Provision for Loan Losses

AgFirst measures risks inherent in its loan portfolio on an ongoing basis and, as necessary, recognizes provision for loan loss expense so that appropriate reserves for loan losses are maintained. Provision for loan losses was \$334 thousand for the three months ended March 31, 2013 compared with a reversal of allowance of \$2.7 million for the corresponding period in 2012. For the three months ended March 31, 2013, provision for loan loss expense included net provision expense of \$490 thousand related to specific reserves (none of which was significant on an individual borrower basis) and net loan loss reversals of \$156 thousand related to general reserves. See Note 3, *Loans and Allowance for Loan Losses*, in the Notes to the Financial Statements for further information.

Noninterest Income

The following table illustrates the changes in noninterest income:

Change in Noninterest Income	For the three months ended March 31,							
					In	crease/		
(dollars in thousands)		2013		2012	(D	ecrease)		
Loan fees	\$	2,723	\$	2,364	\$	359		
Gains (losses) on investments, net		7,592		_		7,592		
Net impairment losses on investments		(1,118)		(750)		(368)		
Gains (losses) on called debt		(1,706)		(12,745)		11,039		
Patronage refunds from other Farm Credit Institutions		185		46		139		
Gains (losses) on other transactions		(420)		1,666		(2,086)		
Other noninterest income		2,427		1,368		1,059		
Total noninterest income	\$	9,683	\$	(8,051)	\$	17,734		

Noninterest income for the three months ended March 31, 2013 increased \$17.7 million compared to the corresponding period in 2012. The increase for the quarter ended March 31, 2013 was primarily due to a decrease of \$11.0 million in losses on called debt and increases of \$7.6 million in gains on investments, net. Gains on investments of \$7.6 million during 2013 were primarily the result of the sale of U.S. Government Agency mortgage backed securities. See discussion of investments in the *Liquidity and Funding Sources* section above and Note 2, *Investment Securities*, in the Notes to the Financial Statements for further information.

Concession or debt issuance expense is amortized over the life of the underlying debt security. When debt securities are called prior to maturity, any unamortized concession is expensed. Losses on called debt decreased \$11.0 million for the three month period ended March 31, 2013. Call options were exercised on bonds totaling \$2.771 billion for the three months ended March 31, 2013 compared to \$8.174 billion for the same period of 2012, as opportunities to call debt were more limited in the 2013 period. The called debt losses are more than offset by interest expense savings realized as called debt is replaced by new debt issued at a lower rate of interest. Over time, the favorable effect on net interest income is diminished as earning assets reprice downward.

For the three months ended March 31, 2013, losses on other transactions increased \$2.1 million compared to the same period last year. This increase resulted primarily from a \$942 thousand insurance recovery recorded in 2012 and an additional \$1.2 million in reserve expense for unfunded commitments for the three months ended March 31, 2013 compared to the same period in 2012.

Other noninterest income increased \$1.1 million for the three months ended March 31, 2013 compared to the same period in 2012, due primarily to lease income received in 2013 from tenants of the Bank office building which was purchased in the fourth quarter of 2012. The Bank is in the process of upfitting vacant space in the building and will relocate its operations there in the first quarter of 2014. Related expenses are recorded in occupancy and equipment expenses discussed below.

Noninterest Expense

The following table illustrates the changes in noninterest expense:

Change in Noninterest Expense	For the three months ended March 31,						
(dollars in thousands)		2013		2012		ncrease/	
Salaries and employee benefits Occupancy and equipment Insurance Fund premiums Other operating expenses Losses (gains) from other property owned Correspondent lending servicing expense	\$	11,921 4,252 2,100 6,295 1,162 2,715	\$	11,795 3,736 1,070 5,478 3,523 2,303	\$	126 516 1,030 817 (2,361) 412	
Total noninterest expense	\$	28,445	\$	27,905	\$	540	

Noninterest expense for the three months ended March 31, 2013 increased \$540 thousand compared to the corresponding period in 2012. The increase for the three months ended March 31, 2013 was due primarily to increases in Insurance Fund premiums, other operating expenses, and occupancy and equipment expenses of \$1.0 million, \$817 thousand, and \$516 thousand, respectively, offset by a \$2.4 million reduction in losses on other property owned.

Occupancy and equipment expense for the three months ended March 31, 2013 increased \$516 thousand compared to the corresponding period in the prior year. These increases were due primarily to increases for the cost of space to maintain the building purchased for future Bank occupancy, as referenced above in the *Noninterest Income* section.

Insurance Fund premiums increased \$1.0 million for the three month period ended March 31, 2013. The 2013 base annual premium rate is 10 basis points compared to the 2012 base annual premium rate of 5 basis points. The Insurance Fund Board makes premium rate adjustments, as necessary, to maintain the secure base amount, which is based upon insured debt outstanding at System banks.

Other operating expenses for the three months ended March 31, 2013 increased \$817 thousand compared to the corresponding period in 2012. The increase primarily resulted from \$1.0 million in additional consulting and professional fees required for system enhancements.

The decrease in losses from other property owned for the three months ended March 31, 2013 compared to the corresponding periods in the prior year resulted from lower writedowns in 2013 as real estate values began to stabilize. See *Other Property Owned* section above.

Correspondent lending servicing expense increased \$412 thousand for the first quarter of 2013, due primarily to increased guarantee fees resulting from higher volume in the correspondent lending portfolio.

DISTRICT MERGER ACTIVITY

Please refer to Note 11, *District Merger Activity*, in the Notes to the Financial Statements for information regarding merger activity in the District.

RECENTLY ISSUED ACCOUNTING PRONOUNCEMENTS

Please refer to Note 1, *Organization, Significant Accounting Policies, and Recently Issued Accounting Pronouncements*, in the Notes to the Financial Statements, and the 2012 Annual Report of AgFirst Farm Credit Bank for recently issued accounting pronouncements.

NOTE: Shareholder investment in a District Association is materially affected by the financial condition and results of operations of AgFirst Farm Credit Bank. Copies of AgFirst's annual and quarterly reports are available upon request free of charge by calling 1-800-845-1745, ext. 2832, or writing Susanne Caughman, Reporting Manager, AgFirst Farm Credit Bank, P.O. Box 1499, Columbia, SC 29202. Combined information concerning AgFirst Farm Credit Bank and District Associations can also be obtained at the Bank's website, *www.agfirst.com*. AgFirst prepares a quarterly report within 40 days after the end of each fiscal quarter, except that no quarterly report need be prepared for the fiscal quarter that coincides with the end of the fiscal year of the institution.

Notes to the Financial Statements

(unaudited)

NOTE 1 — ORGANIZATION, SIGNIFICANT ACCOUNTING POLICIES, AND RECENTLY ISSUED ACCOUNTING PRONOUNCEMENTS

Organization

The accompanying financial statements include the accounts of AgFirst Farm Credit Bank (AgFirst or Bank). AgFirst and its related Agricultural Credit Associations (Associations or District Associations) are collectively referred to as the AgFirst District (District). A description of the organization and operations, the significant accounting policies followed, and the financial condition and results of operations of the Bank as of and for the year ended December 31, 2012 are contained in the 2012 Annual Report to Shareholders. These unaudited interim financial statements should be read in conjunction with the latest Annual Report to Shareholders.

Effective July 1, 2012, Chattanooga, ACA, merged with and into Jackson Purchase, ACA, which then changed its name to River Valley AgCredit, ACA, reducing the number of Associations to nineteen.

Basis of Presentation

In the opinion of management, the accompanying financial statements contain all adjustments necessary for a fair presentation of the interim financial condition and results of operations and conform with generally accepted accounting principles (GAAP) and prevailing practices within the banking industry.

Certain amounts in the prior period financial statements may have been reclassified to conform to the current period presentation. Such reclassifications had no effect on the prior period net income or total capital as previously reported.

The results of any interim period are not necessarily indicative of the results to be expected for a full year.

Significant Accounting Policies

The Bank maintains an allowance for loan losses at a level considered adequate by management to provide for probable and estimable losses inherent in the loan portfolio as of the report date. The allowance for loan losses is increased through provisions for loan losses and loan recoveries and is decreased through loan charge-offs and allowance reversals. A review of individual loans in each respective portfolio is performed periodically to determine the appropriateness of risk ratings and to ensure loss exposure to the Bank has been identified. Certain loan pools acquired from several of the District Associations are analyzed in accordance with the selling Association's allowance methodologies for assigning general and specific allowances. The allowance for loan losses is a valuation account used to reasonably estimate loan losses as of the financial statement date. Determining the appropriate allowance for loan losses balance involves significant judgment about when a loss has been incurred and the amount of that loss. The Bank considers factors such as credit risk classifications, collateral values, risk concentrations, weather related conditions, current production and economic conditions, and prior loan loss experience, among others, when determining the allowance for loan losses.

A specific allowance may be established for impaired loans under Financial Accounting Standards Board (FASB) guidance on accounting by creditors for impairment of a loan. Impairment of these loans is measured based on the present value of expected future cash flows discounted at the loan's effective interest rate, or at the loan's observable market price, or fair value of the collateral if the loan is collateral dependent.

A general allowance may also be established under FASB guidance on accounting for contingencies to reflect estimated probable credit losses incurred in the remainder of the loan portfolio at the financial statement date. The general allowance excludes loans included under the specific allowance discussed above, unless specific

characteristics of the loan indicate that it is probable that there would be an incurred loss in a group of loans with those characteristics. The level of the general allowance may be based on management's best estimate of the likelihood of default adjusted for other relevant factors reflecting the current environment.

The credit risk rating methodology is a key component of the Bank's allowance for loan losses evaluation, and is generally incorporated into the institution's loan underwriting standards and internal lending limit. The Bank uses a two-dimensional loan rating model based on internally generated combined system risk rating guidance that incorporates a 14-point risk rating scale to identify and track the probability of borrower default and a separate scale addressing loss given default over a period of time. Probability of default is the probability that a borrower will experience a default within 12 months from the date of the determination of the risk rating. A default is considered to have occurred if the lender believes the borrower will not be able to pay its obligation in full or the borrower is past due more than 90 days. The loss given default is management's estimate as to the anticipated economic loss on a specific loan assuming default has occurred or is expected to occur within the next 12 months.

Each of the 14 categories carries a distinct percentage of default probability. The 14-point risk rating scale provides for granularity of the probability of default, especially in the acceptable ratings. There are nine acceptable categories that range from a borrower of the highest quality to a borrower of minimally acceptable quality. The probability of default between 1 and 9 is very narrow and would reflect almost no default to a minimal default percentage. The probability of default grows more rapidly as a loan moves from a "9" to other assets especially mentioned and grows significantly as a loan moves to a substandard (viable) level. A substandard (non-viable) rating indicates that the probability of default is almost certain.

Recently Issued Accounting Pronouncements

In February 2013 the FASB issued Accounting Standards Update (ASU) 2013-04, "Liabilities (Topic 405): Obligations Resulting from Joint and Several Liability Arrangements for which the Total Amount of the Obligation Is Fixed at the Reporting Date," which addresses the recognition, measurement and disclosure of certain obligations including debt arrangements, other contractual obligations, and settled litigation and judicial rulings. The amendments are to be applied retrospectively to all prior periods presented for those obligations resulting from joint and several liability arrangements within the Update's scope that exist at the beginning of an entity's fiscal year of adoption. An entity may elect to use hindsight for the comparative periods (if it changed its accounting as a result of adopting the amendments in the Update) and should disclose that fact. The amendments are effective for public entities for fiscal years, and interim periods within those years, beginning after December 15, 2013. For nonpublic entities, the amendments are effective for fiscal years ending after December 15, 2014, and interim periods and annual periods thereafter. Early application is permitted. It is not anticipated the adoption of this guidance will have a material impact on the Bank's financial condition or results of operations but will result in additional disclosures.

In February 2013 the FASB issued ASU 2013-02, "Comprehensive Income (Topic 220): Reporting of Amounts Reclassified Out of Accumulated Other Comprehensive Income." The update is intended to improve the transparency of reporting reclassifications out of accumulated other comprehensive income. The amendments do not change the requirements for reporting net income or other comprehensive income in financial statements. However, the amendments require an entity to provide information about the amounts reclassified out of accumulated other comprehensive income by component. In addition, an entity is required to present, either on the face of the statement where net income is presented or in the notes, significant amounts reclassified out of accumulated other comprehensive income by the respective line items of net income but only if the amount reclassified is required under U.S. GAAP to be reclassified to net income in its entirety in the same reporting period. For other amounts that are not required to be reclassified in their entirety to net income, an entity is required to cross-reference to other disclosures required under U.S. GAAP that provide additional detail about those amounts. For public entities, the amendments are effective prospectively for reporting periods beginning after December 15, 2012. For nonpublic entities, the amendments are effective prospectively for reporting periods beginning after December 15, 2013. Early application is permitted. The Bank elected early adoption of this guidance for 2012. This election had no effect on the Bank's financial condition or results of operations.

In January 2013, the FASB issued ASU 2013-01 "Balance Sheet (Topic 210): Clarifying the Scope of Disclosures about Offsetting Assets and Liabilities." The Update clarifies that ordinary trade receivables and payables are not in the scope of ASU 2011-11, "Balance Sheet (Topic 210): Disclosures about Offsetting Assets and Liabilities."

Specifically, ASU 2011-11 applies only to derivatives, repurchase agreements and reverse repurchase agreements, and securities borrowing and securities lending transactions that are either offset in accordance with specific criteria or subject to a master netting arrangement or similar agreement. The effective date is the same as that for ASU 2011-11 below.

In December 2011, the FASB issued ASU 2011-11, "Balance Sheet (Topic 210) - Disclosures about Offsetting Assets and Liabilities." The guidance requires an entity to disclose information about offsetting and related arrangements to enable users of its financial statements to understand the effect of those arrangements on its financial position. This includes the effect or potential effect of rights of setoff associated with an entity's recognized assets and recognized liabilities. The requirements apply to recognized financial instruments and derivative instruments that are offset in accordance with accounting guidance and for those recognized financial instruments and derivative instruments that are subject to an enforceable master netting arrangement or similar agreement, irrespective of whether they are offset or not. This guidance is to be applied retrospectively for all comparative periods and is effective for annual reporting periods beginning on or after January 1, 2013, and interim periods within those annual periods. The adoption of this guidance, in conjunction with ASU 2013-01 above, will not impact the Bank's financial condition or its results of operations, but will result in additional disclosures.

Other recently issued accounting pronouncements are discussed in the 2012 Annual Report to Shareholders.

NOTE 2 — INVESTMENT SECURITIES

AgFirst's investments consist primarily of mortgage-backed securities (MBSs) collateralized by U.S. government or U.S. agency guaranteed residential mortgages. They are held to maintain a liquidity reserve, manage short-term surplus funds, and manage interest rate risk. These securities meet the applicable Farm Credit Administration (FCA) regulatory guidelines related to government agency guaranteed investments.

Included in the available-for-sale investments are non-agency collateralized mortgage obligations (CMOs) and asset backed securities (ABSs). These securities must meet the applicable FCA regulatory guidelines, which require them to be high quality, senior class, and rated in the top category (AAA/Aaa) by Nationally Recognized Statistical Rating Organizations (NRSROs) at the time of purchase. To achieve these ratings, the securities may have a guarantee of timely payment of principal and interest, credit enhancements achieved through over-collateralization or other means, and priority of payments for senior classes over junior classes. All of the non-agency securities owned have credit enhancement features including senior/subordinate structure and/or are backed by a bond insurer.

The FCA considers a non-agency security ineligible if it falls below the AAA/Aaa credit rating criteria and requires System institutions to provide notification to the FCA. Non-agency CMO and ABS securities not rated in the top category by at least one of the NRSROs at March 31, 2013 had a fair value of \$197.7 million and \$27.0 million, respectively. For each of these investment securities in the Bank's portfolio rated below AAA/Aaa, the FCA has approved, with conditions, for the Bank to continue to hold these investments.

Held-to-maturity Mission Related Investments consist primarily of Rural America Bonds, which are private placement securities purchased under the Mission Related Investment Program approved by the FCA. In its Conditions of Approval for the program, the FCA considers a Rural America Bond ineligible if its investment rating, based on the internal 14-point risk rating scale used to also grade loans, falls below 9. FCA approval has been obtained to allow the Bank to continue to hold four Rural America Bonds whose credit quality has deteriorated beyond the program limits.

Available-for-sale

A summary of the amortized cost and fair value of debt securities held as available-for-sale investments follows:

Substantially all of these investments have contractual maturities in excess of ten years. However, expected maturities for these types of securities will differ from contractual maturities because borrowers may have the right to prepay obligations with or without prepayment penalties.

An investment is considered impaired if its fair value is less than its cost. This also applies to those securities other-than-temporarily impaired for which a credit loss has been recognized but noncredit-related losses continue to remain unrealized. The following tables show the fair value and gross unrealized losses for investments that have been in a continuous unrealized loss position aggregated by investment category at each reporting period. A continuous unrealized loss position for an investment is measured from the date the impairment was first identified.

FASB guidance contemplates numerous factors in determining whether an impairment is other-than-temporary. These factors include: (1) whether or not management intends to sell the security, (2) whether it is more likely than not that management would be required to sell the security before recovering its costs, and (3) whether management expects to recover the security's entire amortized cost basis (even if there is no intention to sell). If the Bank intends to sell the security or it is more likely than not that it would be required to sell the security, the impairment loss equals the full difference between amortized cost and fair value of the security. When the Bank does not intend to sell securities in an unrealized loss position and it is not more likely than not that it would be required to sell the securities, other-than-temporary impairment loss is separated into credit loss and non-credit loss. Credit loss is defined as the shortfall of the present value of the cash flows expected to be collected in relation to the amortized cost basis.

The Bank performs periodic credit reviews, including other-than-temporary impairment analyses, on its investment securities portfolio. The objective is to quantify future possible loss of principal or interest due on securities in the portfolio. Factors considered in determining whether an impairment is other-than-temporary include among others: (1) the length of time and the extent to which the fair value is less than cost, (2) adverse conditions specifically related to the industry, (3) geographic area and the condition of the underlying collateral, (4) payment structure of the security, (5) ratings by rating agencies, (6) the credit worthiness of bond insurers, and (7) volatility of the fair value changes. Based on the results of all analyses, the Bank has recognized credit-related other-than-temporary impairment during the first three months of 2013 of \$1.1 million in connection with non-agency ABS and CMO securities, which is included in Impairment Losses on Investments in the Statements of Income.

Since the Bank does not intend to sell these other-than-temporarily impaired debt securities and is not more likely than not to be required to sell before recovery, the total other-than temporary impairment is reflected in the Statements of Income with: (1) a net other-than-temporary impairment amount related to estimated credit loss, and (2) an amount relating to all other factors, recognized as a reclassification to or from Other Comprehensive Income.

The Bank uses the present value of cash flows expected to be collected from each debt security to determine the amount of credit loss. This technique requires assumptions related to the underlying collateral, including default rates, amount and timing of prepayments, and loss severity. Assumptions can vary widely from security to security and are influenced by such factors as loan interest rate, geographical location of the borrower, borrower characteristics, and collateral type.

Significant inputs used to estimate the amount of credit loss include, but are not limited to, performance indicators of the underlying assets in the security (including default rates, delinquency rates, and percentage of nonperforming assets), loan-to-collateral value ratios, third-party guarantees, current levels of subordination, vintage, geographic concentration, and credit ratings. The Bank obtains assumptions for the default rate, prepayment rate, and loss severity rate from an independent third party.

Following are the assumptions used at:

	March 31, 2013						
Assumptions Used	Mortgage-backed Securities	Asset-backed Securities					
Default rate by range Prepayment rate by range Loss severity by range	0.97% to 35.27% 6.70% to 18.08% 4.06% to 75.36%	5.35% to 61.89% 4.85% to 14.93% 60.79% to 100.00%					

	December 31, 2012							
Assumptions Used	Mortgage-backed Securities	Asset-backed Securities						
Default rate by range	0.53% to 32.62%	5.49% to 57.89%						
Prepayment rate by range	7.07% to 19.62%	5.65% to 17.57%						
Loss severity by range	3.88% to 71.36%	56.22% to 100.00%						

For all other impaired investments, the Bank has not recognized any credit losses as the impairments are deemed temporary and result from non-credit related factors. The Bank has the ability and intent to hold these investments until a recovery of unrealized losses occurs, which may be at maturity, and at this time expects to collect the full principal amount and interest due on these securities. Substantially all of these investments were in U.S.

Government agency securities and the Bank expects these securities would not be settled at a price less than their amortized cost. For the three months ended March 31, 2013, net unrealized losses of \$3.8 million were recognized in other comprehensive income for available-for-sale investments that are not other-than-temporarily impaired.

The following schedule details the activity related to cumulative credit losses on investments recognized in earnings for which a portion of an other-than-temporary impairment was recognized in other comprehensive income:

	For the three months ended March 31,								
(dollars in thousands)		2013		2012					
Cumulative Losses Beginning of Period	\$	38,217	\$	36,224					
Additions for the amount related to credit loss for which other-than- temporary impairment was not previously recognized		_		_					
Additions for the amount related to credit loss for which other-than- temporary impairment was previously recognized		1,118		750					
Reductions for increases in expected cash flows Reductions for losses incurred		(384) (422)		(342) (1,447)					
Cumulative Losses End of Period	\$	38,529	\$	35,185					

NOTE 3 — LOANS AND ALLOWANCE FOR LOAN LOSSES

For a complete description of the Bank's accounting for loans (including impaired loans and the allowance for loan losses) and definitions of loan types, see the 2012 Annual Report to Shareholders.

Credit risk arises from the potential inability of an obligor to meet its repayment obligation. The Bank manages credit risk associated with lending activities through an assessment of the credit risk profile of an individual obligor. The Bank sets its own underwriting standards and lending policies that provide direction to loan officers and are approved by the board of directors.

The credit risk management process begins with an analysis of the obligor's credit history, repayment capacity and financial position. Repayment capacity focuses on the obligor's ability to repay the obligation based on cash flows from operations or other sources of income, including non-farm income. Real estate mortgage loans must be secured by first liens on the real estate collateral. As required by FCA regulations, each institution that makes loans on a secured basis must have collateral evaluation policies and procedures.

The credit risk rating process for loans uses a two-dimensional structure, incorporating a 14-point probability of default scale (as discussed in Note 1 above) and a separate scale addressing estimated percentage loss in the event of default. The loan rating structure incorporates borrower risk and transaction risk. Borrower risk is the risk of loss driven by factors intrinsic to the borrower. The transaction risk is related to the structure of a credit (tenor, terms, and collateral).

A summary of loans outstanding at period end follows:

(dollars in thousands)	March 31, 2013	December 31, 2012

Total Loans	\$ 19,547,516	\$ 20,209,251

^{*} Balance is reflected net of \$200.0 million of direct notes sold to an outside institution.

A substantial portion of the Bank's loan portfolio consists of notes receivable from District Associations (Direct Notes). These notes are used by the Associations to fund their loan portfolios, which collateralize the notes. Therefore the Bank's concentration of credit risk in various agricultural commodities associated with these notes approximates that of the District as a whole. Loan concentrations are considered to exist when there are amounts loaned to a multiple number of borrowers engaged in similar activities, which would cause them to be similarly impacted by economic or other conditions. A substantial portion of the Associations' lending activities is collateralized, and their exposure to credit loss associated with lending activities is reduced accordingly, which further mitigates credit risk to the Bank.

The Bank may purchase or sell participation interests with other parties in order to diversify risk, manage loan volume, and comply with FCA regulations. The following tables present participation loan balances at periods ended:

A restructuring of a debt constitutes a troubled debt restructuring (TDR) if the creditor for economic or legal reasons related to the debtor's financial difficulties grants a concession to the debtor that it would not otherwise consider. The following tables present additional information about activity that occurred during the periods presented related to TDRs. The tables do not include purchased credit impaired loans.

Additional commitments to lend to borrowers whose loans have been modified in troubled debt restructurings was \$0 and \$13.9 million at March 31, 2013 and December 31, 2012, respectively.

NOTE 4 — FAIR VALUE MEASUREMENT

Fair value is defined as the exchange price that would be received for an asset or paid to transfer a liability in an orderly transaction between market participants in the principal or most advantageous market for the asset or liability.

Accounting guidance establishes a fair value hierarchy for disclosure of fair value measurements to maximize the use of observable inputs, that is, inputs that reflect the assumptions market participants would use in pricing an asset or liability based on market data obtained from sources independent of the reporting entity. The valuation hierarchy is based upon the transparency of inputs to the valuation of an asset or liability as of the measurement date. A financial instrument's categorization within the valuation hierarchy is based upon the lowest level of input that is significant to the fair value measurement.

The classifications of the Bank's assets and liabilities within the fair value hierarchy are as follows:

Level 1

Level 1 inputs to the valuation methodology are unadjusted quoted prices for identical assets or liabilities in active markets. Level 1 assets and liabilities could include investment securities and derivative contracts that are traded in an active exchange market, in addition to certain U.S. Treasury securities that are highly-liquid and are actively traded in over-the-counter markets.

Level 1 assets consist of assets held in trust funds related to deferred compensation and supplemental retirement plans. The trust funds include investments in securities that are actively traded and have quoted net asset value prices that are directly observable in the marketplace.

For cash and cash equivalents, the carrying value is primarily utilized as a reasonable estimate of fair value.

Level 2

Level 2 inputs to the valuation methodology include quoted prices for similar assets and liabilities in active markets; quoted prices in markets that are not active; and inputs that are observable, or can be corroborated, for substantially the full term of the asset or liability. Level 2 assets and liabilities could include investment securities that are traded in active, non-exchange markets and derivative contracts that are traded in active, over-the-counter markets.

The fair value of substantially all investment securities is determined from third-party valuation services that estimate current market prices. Inputs and assumptions related to third-party market valuation services are typically observable in the marketplace. Such services incorporate prepayment assumptions and underlying mortgage- or asset-backed collateral information to generate cash flows that are discounted using appropriate benchmark interest rate curves and volatilities. Third-party valuations also incorporate information regarding broker/dealer quotes, available trade information, historical cash flows, credit ratings, and other market information. Such valuations represent an estimated exit price, or price to be received by a seller in active markets to sell the investment securities to a willing participant.

Level 2 assets include investments in U.S. government and agency mortgage-backed securities and U.S. agency debt securities, all of which use unadjusted values from third parties or internal pricing models. The underlying loans for these investment securities are residential mortgages. Also included are federal funds sold, securities purchased under resale agreements, and other highly-liquid funds, all of which are non-exchange-traded instruments. The market value of these federal funds sold and other instruments is generally their face value, plus accrued interest, as these instruments are highly-liquid, readily convertible to cash, and short-term in nature.

The fair value of derivative financial instruments is the estimated amount to be received to sell a derivative asset or paid to transfer a derivative liability in active markets among willing participants at the reporting date. Estimated fair values are determined through internal market valuation models which use an income approach. These models incorporate benchmark interest rate curves (primarily the LIBOR swap curve), potential volatilities of future interest rate movements, and other inputs which are observable directly or indirectly in the marketplace. The Bank compares internally calculated derivative valuations to broker/dealer quotes to substantiate the results.

Collateral liabilities are also considered Level 2. The majority of derivative contracts are supported by bilateral collateral agreements with counterparties requiring the posting of collateral in the event certain dollar thresholds of credit exposure are reached. Face value plus accrued interest approximates the fair value of collateral liabilities.

Level 3

Level 3 inputs to the valuation methodology are unobservable and supported by little or no market activity. Level 3 assets and liabilities could include investments and derivative contracts whose value is determined using pricing models, discounted cash flow methodologies, or similar techniques, and other instruments for which the determination of fair value requires significant management judgment or estimation. Level 3 assets and liabilities could also include investments and derivative contracts whose price has been adjusted based on dealer quoted pricing that is different than the third-party valuation or internal model pricing.

Because no active market exists for the Bank's loans, fair value is estimated by discounting the expected future cash flows using interest rates at which similar loans would currently be made to borrowers with similar credit risk. For purposes of determining fair value of accruing loans, the portfolio is segregated into pools of loans with homogeneous characteristics based upon repricing and credit risk. Expected future cash flows and interest rates reflecting appropriate credit risk are separately determined for each individual pool.

Fair values of loans in a nonaccrual status are estimated to be the carrying amount of the loan less specific reserves. Certain loans evaluated for impairment under FASB guidance have fair values based upon the underlying collateral, as the loans were collateral-dependent. Specific reserves were established for these loans when the value of the collateral, less estimated cost to sell, was less than the principal balance of the loan. The fair value measurement process uses independent appraisals and other market-based information, but in many cases it also requires significant input based on management's knowledge of and judgment about current market conditions, specific issues relating to the collateral and other matters.

The Bank's non-agency ABS and CMO investment portfolios are also considered Level 3. The underlying loans for the ABSs are mortgage related. The underlying loans for the CMO securities are residential mortgages. Based on the currently illiquid marketplace for these investments and the lack of marketplace information available as inputs and assumptions to the valuation process, the Bank classified the non-agency ABS and CMO investment portfolios as Level 3 assets.

Following the market disruptions of 2008, the Bank began considering both a price, or "mark," provided by a third party pricing service and a value determined using the results of a modeling process for purposes of estimating the fair values of securities in the non-agency ABS and CMO portfolios, as well as the resulting unrealized gain/loss impact through AOCI. The markets for these types of securities had become inactive and the prices were reflecting distressed and forced sales as evidenced by their volatility. Over time, the valuations received from the pricing service began converging toward a more reasonable correlation with the Bank's understanding of the underlying credit factors and financial metrics of these securities, though the markets remained inactive. During 2012, management judged that values supplied by the third party pricing service were consistent with GAAP and that it was appropriate to return to the valuation methodology used prior to 2009; which was the use of third party vendor pricing alone to reflect the fair values of these portfolios in financial reporting.

For other investments, fair value is estimated by discounting future annual cash flows using prevailing rates for similar instruments at the measurement date.

Other property owned is classified as a Level 3 asset. The fair value is generally determined using formal appraisals of each individual property. These assets are held for sale. Costs to sell represent transaction costs and are not included as a component of the fair value of other property owned. Other property owned consists primarily of real and personal property acquired through foreclosure or deed in lieu of foreclosure and is carried as an asset held for sale, which is generally not its highest and best use. These properties are part of the Bank's credit risk mitigation efforts, not its ongoing business. In addition, FCA regulations require that these types of property be disposed of within a reasonable period of time.

Systemwide Debt Securities are not all traded in the secondary market and those that are traded may not have readily available quoted market prices. Therefore, the fair value of the instruments is estimated by calculating the discounted value of the expected future cash flows. The discount rates used are based on the sum of quoted market yields for the Treasury yield curve and an estimated yield-spread relationship between Systemwide Debt Securities and Treasury securities. An appropriate yield-spread is estimated, taking into consideration selling group member

(banks and securities dealers) yield indications, observed new GSE debt security pricing, and pricing levels in the related U.S. Dollar (USD) interest rate swap market.

The following tables present the changes in Level 3 assets and liabilities measured at fair value on a recurring basis for the periods presented. The Bank had no transfers of assets or liabilities into or out of Level 1 or Level 2 during the reporting period.

SENSITIVITY TO CHANGES IN SIGNIFICANT UNOBSERVABLE INPUTS

Discounted cash flow or similar modeling techniques are generally used to determine the recurring fair value measurements for Level 3 assets and liabilities. Use of these techniques requires determination of relevant inputs and assumptions, some of which represent significant unobservable inputs as indicated in the tables that follow. Accordingly, changes in these unobservable inputs may have a significant impact on fair value.

Certain of these unobservable inputs will (in isolation) have a directionally consistent impact on the fair value of the instrument for a given change in that input. Alternatively, the fair value of the instrument may move in an opposite direction for a given change in another input. Where multiple inputs are used within the valuation technique of an asset or liability, a change in one input in a certain direction may be offset by an opposite change in another input having a potentially muted impact to the overall fair value of that particular instrument. Additionally, a change in one unobservable input may result in a change to another unobservable input (that is, changes in certain inputs are interrelated with one another), which may counteract or magnify the fair value impact.

Investment Securities

The fair values of predominantly all Level 3 investment securities have consistent inputs, valuation techniques and correlation to changes in underlying inputs. The models used to determine fair value for these instruments use certain significant unobservable inputs within a discounted cash flow or market comparable pricing valuation technique. Such inputs generally include discount rate components including risk premiums, prepayment estimates, default estimates and loss severities.

These Level 3 assets would decrease (increase) in value based upon an increase (decrease) in discount rates, defaults, or loss severities. Conversely, the fair value of these assets would generally increase (decrease) in value if the prepayment input were to increase (decrease).

Generally, a change in the assumption used for defaults is accompanied by a directionally similar change in the risk premium component of the discount rate (specifically, the portion related to credit risk) and a directionally opposite change in the assumption used for prepayments. Unobservable inputs for loss severities do not normally increase or decrease based on movements in the other significant unobservable inputs for these Level 3 assets.

Derivative Instruments

Level 3 derivative instruments consist of forward contracts that represent a hedge of an unrecognized firm commitment to purchase agency securities at a future date. The value of the forward is the difference between the fair value of the security at inception of the forward and the measurement date. Significant inputs for these valuations would be discount rate and volatility. These Level 3 derivatives would decrease (increase) in value based upon an increase (decrease) in the discount rate.

Generally, for derivative instruments which are subject to changes in the value of the underlying referenced instrument, change in the assumption used for default rate is accompanied by directionally similar change in the risk premium component of the discount rate (specifically, the portion related to credit risk) and a directionally opposite change in the assumption used for prepayment rates.

Unobservable inputs for discount rate and volatility do not increase or decrease based on movements in other significant unobservable inputs for these Level 3 instruments.

Other Property Owned/Impaired Loans

Other property owned and impaired loans are valued using appraisals, market comparable sales, replacement costs and income and expense (cash flow) techniques. Certain unobservable inputs are used within these techniques to determine the Level 3 fair value of these properties. The significant unobservable inputs are primarily sensitive only to industry, geographic and overall economic conditions, and/or specific attributes of each property.

Inputs to Valuation Techniques

Management determines the Bank's valuation policies and procedures. Internal valuation processes are calibrated annually by an independent consultant. Fair value measurements are analyzed on a periodic basis. Documentation is obtained for third party information, such as pricing, and periodically evaluated alongside internal information and pricing.

Quoted market prices are generally not available for the instruments presented below. Accordingly, fair values are based on judgments regarding anticipated cash flows, future expected loss experience, current economic conditions, risk characteristics of various financial instruments, and other factors. These estimates involve uncertainties and matters of judgment, and therefore cannot be determined with precision. Changes in assumptions could significantly affect the estimates.

	F	air Value	Valuation Technique(s)	Unobservable Input	Range
Firm commitments-when issued securities	\$	_	Broker/Consensus pricing	Offered quotes	None outstanding
Non-agency Securities	\$	232,996	Vendor priced	**	
Impaired loans and other property owned	\$	80,317	Appraisal	Income and expense	*
				Comparable sales	*
				Replacement cost	*
				Comparability adjustments	*

^{*} Ranges for this type of input are not useful because each collateral property is unique.

^{**} The significant unobservable inputs used to estimate fair value for Level 3 assets and liabilities that are obtained from third party vendors are not included in the table as the specific inputs applied are not provided by the vendor.

Information about Recurring and Nonrecurring Level 2 Fair Value Measurements

	Valuation Technique(s)	Input
Investments available for sale	Discounted cash flow	Constant prepayment rate
		Probability of default
		Loss severity
	Quoted prices	Price for similar security
Federal funds sold, securities purchased under resale agreements and other	Carrying value	Par/principal and appropriate interest yield
Interest rate swaps	Discounted cash flow	Annualized volatility
		Counterparty credit risk
		Own credit risk

Information about Other Financial Instrument Fair Value Measurements

	Valuation Technique(s)	Input
Loans	Discounted cash flow	Prepayment forecasts
		Probability of default
		Loss severity
Cash and cash equivalents	Carrying value	Par/principal and appropriate interest yield
Other investments	Discounted cash flow	Prepayment rate
		Probability of default
		Loss severity
Assets held in trust funds	Quoted prices	Price for identical security
Mission Related Investments	Discounted cash flow	Risk adjusted spread
Bonds and notes	Discounted cash flow	Benchmark yield curve
		Derived yield spread
		Own credit risk
Cash collateral	Carrying value	Par/principal and appropriate interest yield

The following tables present the carrying amounts and fair values of assets and liabilities that are measured at fair value on a recurring and nonrecurring basis, as well as, those financial instruments not measured at fair value, for each of the hierarchy levels at the period ended:

NOTE 5 — COMMITMENTS AND CONTINGENT LIABILITIES

Association Financial Assistance

On January 1, 2011, Farm Credit of North Florida, ACA, and Farm Credit of Southwest Florida, ACA, merged with and into Farm Credit of South Florida, ACA. Farm Credit of South Florida then changed its name to Farm Credit of Florida, ACA. As part of the merger, those Associations entered into an agreement with the Bank under which the Bank would provide limited financial assistance to the merged Association in the event of substantial further deterioration in the combined high risk asset portfolio of the merged Association. This agreement relates only to a finite pool of high risk assets of the merged Association existing at the merger date, which had a net book value at January 1, 2011 of \$250.0 million. At March 31, 2013, those assets had a net book value of \$102.2 million. This agreement with the Bank does not include losses that are sustained outside of the high risk asset pool. Protection to the Bank, such as limitations on the Association's ability to make patronage distributions and certain other restrictions, is provided in the agreement if certain merged Association capital ratios fail to meet minimum established levels.

Under the financial assistance agreement, if specified minimum levels of capital allocated to the high risk asset pool are not maintained by the merged Association, the Bank would provide financial assistance as stipulated in the agreement. The assistance consists of three components. First, AgFirst would allow the Association to include AgFirst allocated stock owned by the merged Association in its capital ratio computations. This allocated stock, which totals \$10.1 million, has been counted entirely by the Bank in its capital ratio computations under an existing

capital sharing arrangement. Second, AgFirst would redeem purchased stock held by the merged Association, up to the total amount outstanding, which was \$1.3 million at December 31, 2012, and the redeemed amount would be included in capital ratio computations by the merged Association. This purchased stock has been counted entirely by the Bank in its capital ratio computations under an existing capital sharing arrangement. The third and final level of assistance, if elected by the Association, would be a purchase by AgFirst of the high risk asset pool from the Association at net book value. There would also be a corresponding repurchase by the merged Association of its previously redeemed stock in AgFirst and a return to the capital sharing arrangement allowing the Bank to count the allocated stock in its capital ratio computations in amounts necessary to satisfy the capitalization requirement under AgFirst's capitalization plan then in effect.

At December 31, 2012, capital allocated to the high risk asset pool failed to meet specified minimum levels due to losses in the pool from resolution efforts, provisions, and write-downs subsequent to the merger date. This resulted in the Bank providing assistance under the agreement by allowing the merged Association to include in its capital ratio computations \$3.3 million of the total \$10.1 million of AgFirst allocated stock owned by the merged Association. At March 31, 2013 this amount increased to \$10.1 million of allocated stock and the Bank redeemed \$876 thousand in purchased stock.

The high risk asset pool is expected to continue experiencing additional losses. It is probable that the first two levels of financial assistance will be exhausted during 2013. Assistance provided under the agreement did not have a material impact on the financial condition and results of operations of the Bank at March 31, 2013 and additional assistance in the future is also not expected to have a material adverse impact on either the financial condition or future operating results of the Bank.

Other Commitments and Contingencies

Under the Farm Credit Act of 1971, each Farm Credit System (System) bank is primarily liable for its portion of Systemwide bond and discount note obligations. Additionally, the banks are jointly and severally liable for the bonds and notes of the other System banks. The bonds and notes of the System totaled \$199.005 billion at March 31, 2013.

There are no material claims pending against the Bank in which money damages are asserted.

NOTE 6 — EMPLOYEE BENEFIT PLANS

Following are retirement and other postretirement benefit expenses for the Bank:

	For the three months ended March 31,							
(dollars in thousands)	2013	2012						
Pension	\$ 2,424	\$ 2,478						
401k	299	300						
Other postretirement benefits	270	223						
Total	\$ 2,993	\$ 3,001						

Following are retirement and other postretirement benefit contributions for the Bank. Projections are based upon actuarially determined amounts as of the most recent measurement date of December 31, 2012.

(dollars in thousands)	Actual	Projected	Projected
	YTD	Contributions	Total
	Through	for Remainder	Contributions
	3/31/13	of 2013	2013
Pensions	\$ 144	\$ 8,926	\$ 9,070
Other postretirement benefits	256	838	1,094
Total	\$ 400	\$ 9,764	\$ 10,164

Contributions in the above table include allocated estimates of funding for multi-employer plans in which the Bank participates. These amounts may change when a total funding amount and allocation is determined by the respective Plans' Sponsor Committees. Also, market conditions could impact discount rates and return on plan assets which could change contributions necessary before the next plan measurement date of December 31, 2013.

Further details regarding employee benefit plans are contained in the 2012 Annual Report to Shareholders.

NOTE 7 — DERIVATIVE FINANCIAL INSTRUMENTS AND HEDGING ACTIVITIES

One of the Bank's goals is to minimize interest rate sensitivity by managing the repricing characteristics of assets and liabilities so that the net interest margin is not adversely affected by movements in interest rates. The Bank maintains an overall interest rate risk management strategy that may incorporate the use of derivative instruments to lower cost of funding or to reduce interest rate risk. Currently, the primary derivative type used by the Bank is interest rate swaps, which convert fixed interest rate debt to a lower floating interest rate than was achievable from issuing floating rate debt with identical repricing characteristics. They may allow the Bank to lower funding costs, allow it to diversify sources of funding, or alter interest rate exposures arising from mismatches between assets and liabilities. Under these arrangements, the Bank agrees with other parties to exchange, at specified intervals, payment streams calculated on a specified notional principal amount, with at least one stream based on a specified floating rate index.

The Bank may also purchase interest rate derivatives such as caps, in order to reduce the impact of rising interest rates on its floating-rate debt, and floors, in order to reduce the impact of falling interest rates on its floating-rate assets. In addition, the Bank may also fix a price to be paid in the future which qualifies as a derivative forward contract.

As a result of interest rate fluctuations, interest income and interest expense related to hedged variable-rate assets and liabilities, respectively, will increase or decrease. Another result of interest rate fluctuations is that hedged fixed-rate assets and liabilities will appreciate or depreciate in market value. The effects of any earnings variability or unrealized changes in market value are expected to be substantially offset by the Bank's gains or losses on the derivative instruments that are linked to these hedged assets and liabilities. The Bank considers its strategic use of derivatives to be a prudent method of managing interest rate sensitivity, as it prevents earnings from being exposed to undue risk posed by changes in interest rates.

The primary types of derivative instrument used and the amount of activity for the periods presented is summarized in the following table:

		March 201	,		December 31, 2012					
Notional Amounts (dollars in millions)		Receive- Fixed Swaps		ward tracts		eceive- ed Swaps	Forward Contracts			
Balance at beginning of period Additions	\$	360	\$	 -	\$	535	\$	66 542		
Maturities/amortization Terminations Balance at end of period	\$	(50) - 310	\$		\$	(175) - 360	\$	(608)		

By using derivative instruments, the Bank exposes itself to credit and market risk. If a counterparty fails to fulfill its performance obligations under a derivative contract, the Bank's credit risk will equal the fair value gain in the derivative. Generally, when the fair value of a derivative contract is positive, this indicates that the counterparty owes the Bank, thus creating a repayment risk for the Bank. When the fair value of the derivative contract is negative, the Bank owes the counterparty and, therefore, assumes no repayment risk.

To minimize the risk of credit losses, the Bank transacts with counterparties that have an investment grade credit rating from a major rating agency and also monitors the credit standing of, and levels of exposure to, individual counterparties. The Bank typically enters into master agreements that contain netting provisions. These provisions allow the Bank to require the net settlement of covered contracts with the same counterparty in the event of default

by the counterparty on one or more contracts. The Bank does not anticipate nonperformance by any of these counterparties. A number of swaps are supported by collateral arrangements with counterparties. Accounting guidance requires a pledgee to reflect as a liability the value of any cash collateral held in its statement of condition. However, securities held as collateral are not reported in the pledgee's statement of condition, even though in the custody of the pledgee.

At March 31, 2013, the Bank had not posted collateral with respect to any of these arrangements.

Counterparty exposure related to derivatives at:

(dollars in millions)	March 31, 2013	December 31, 2012
Estimated Gross Credit Risk	\$37.8	\$41.4
Percent of Notional	12.20%	11.50%
Cash Collateral Held (on balance sheet)	\$ —	\$-
Securities Collateral Held (off balance sheet)	\$15.8	\$19.6

The Bank's derivative activities are monitored by its Asset-Liability Management Committee (ALCO) as part of the Committee's oversight of the Bank's asset/liability and treasury functions. The ALCO is responsible for approving hedging strategies that are developed within parameters established by the Bank's Board of Directors through the analysis of data derived from financial simulation models and other internal and industry sources. The resulting hedging strategies are then incorporated into the Bank's overall interest rate risk-management strategies.

Fair Value Hedges

For derivative instruments designated as fair value hedges, the gains or losses on the derivative, as well as the offsetting loss or gain on the hedged item attributable to the hedged risk, are recognized in current earnings. The Bank includes the gain or loss on the hedged items in the same line item (interest expense) as the offsetting loss or gain on the related interest rate swaps. The amount of the loss on interest rate swaps recognized in interest expense for the three months ended March 31, 2013 was \$3.6 million, while the amount of the gain on the Systemwide Debt Securities was \$3.6 million. The amount of the loss on interest rate swaps recognized in interest expense for the three months ended March 31, 2012 was \$3.5 million, while the amount of the gain on the Systemwide Debt Securities was \$3.5 million. Gains and losses on each derivative representing either hedge ineffectiveness or hedge components excluded from the assessment of effectiveness are recognized in current earnings.

Cash Flow Hedges

From time to time, the Bank may acquire when-issued securities, generally Government Agency guaranteed bonds. The when-issued transactions are contracts to purchase securities that will not be delivered until 30, or more, days in the future. These purchase commitments are considered derivatives (cash flow hedges) in the form of forward contracts. Any difference in market value of the contracted securities, between the purchase and reporting or settlement date, represent the value of the forward contracts. These amounts are included in Other Comprehensive Income (OCI), and Other Liabilities or Other Assets as appropriate, as firm commitments in the Bank's Balance Sheet for each period end. At March 31, 2013 and December 31, 2012, the Bank had not committed to purchase any when-issued bonds.

For derivative instruments that are designated and qualify as a cash flow hedge, such as the Bank's forward contracts, the effective portion of the gain or loss on the derivative is reported as a component of other comprehensive income and reclassified into earnings in the same period or periods during which the hedged transaction affects earnings. Gains and losses on the derivative representing either hedge ineffectiveness or hedge components excluded from the assessment of effectiveness are recognized in current earnings.

Fair Values of Derivative Instruments

The following tables represent the fair value of derivative instruments at March 31, 2013 and December 31, 2012:

(dollars in thousands)	Balance Sheet Classification – Assets	3/31/13 Fair Value	Balance Sheet Classification - Liabilities	3/31/13 Fair Value
Derivatives designated as				_
hedging instruments: Receive-fixed swaps Forward contracts	Other Assets Other Assets	\$ 37,823 _	Other Liabilities Other Liabilities	\$ - -

NOTE 8 – PERPETUAL PREFERRED STOCK

Payment of dividends or redemption price on issued Preferred Stock may be restricted if the Bank fails to satisfy applicable minimum capital adequacy, surplus, and collateral requirements.

During 2012, the Bank repurchased, through privately negotiated transactions, and cancelled Class B Perpetual Non-Cumulative Fixed-to-Floating Rate Subordinated Preferred Stock with a par value of \$124.8 million. The effect of the repurchases on shareholders' equity was to reduce preferred stock outstanding by \$124.8 million and record \$36.6 million of additional paid-in-capital.

Total	\$	190,973	\$	_	\$	190,973	\$	(169,140)	\$	_	\$	21,833	

There were no liabilities subject to master netting arrangements or similar agreements during the reporting periods.

A description of the rights of setoff associated with recognized derivative assets and liabilities subject to enforceable master netting arrangements is located in Note 7, *Derivative Financial Instruments and Hedging Activities*.

The reverse repurchase agreements are accounted for as collateralized lending.

NOTE 11 — DISTRICT MERGER ACTIVITY

Effective July 1, 2012, Chattanooga, ACA, merged with and into Jackson Purchase, ACA. Jackson Purchase, ACA, then changed its name to River Valley AgCredit, ACA. The merger was accounted for under the acquisition method of accounting.

NOTE 12 — SUBSEQUENT EVENTS

The Bank has evaluated subsequent events and has determined that, except as described below, there are none requiring disclosure through May 9, 2013, which is the date the financial statements were issued.

On April 15, 2013, the AgFirst Board of Directors gave final approval to exercise redemption and cancellation rights on the entire \$150.0 million of Perpetual Non-cumulative Preferred Stock issued October 14, 2003. The stock will be redeemed May 15, 2013 at its par value together with accrued and unpaid dividends.
